Defn: Consisting of sulphur; having the qualities of sulphur, or brimstone; impregnated with sulphur.
Her snakes united, sulphureous waters drink. Pope.
-- Sul*phu"re*ous*ly, adv.
-- Sul*phu"re*ous*ness, n.

SULPHURET
Sul"phu*ret, n. (Chem.)

Defn: A sulphide; as, a sulphuret of potassium. [Obsoles.]

SULPHURETED
Sul"phu*ret‘ed, a. (Chem.)

Defn: Combined or impregnated with sulphur; sulphurized. [Written also sulphuretted.] Sulphureted hydrogen. (Chem.) See Hydrogen sulphide, under Hydrogen.

SULPHURIC
Sul*phu"ric, a. Etym: [Cf. F. sulfurique.]

1. Of or pertaining to sulphur; as, a sulphuric smell.

2. (Chem.)

Defn: Derived from, or containing, sulphur; specifically, designating those compounds in which the element has a higher valence as contrasted with the sulphurous compounds; as, sulphuric acid. Sulphuric acid. (a) Sulphur trioxide (see under Sulphur); -- formerly so called on the dualistic theory of salts. [Obs.] (b) A heavy, corrosive, oily liquid, H2SO4, colorless when pure, but usually yellowish or brownish, produced by the combined action of sulphur dioxide, oxygen (from the air), steam, and nitric fumes. It attacks and dissolves many metals and other intractable substances, sets free most acids from their salts, and is used in the manufacture of hydrochloric and nitric acids, of soda, of bleaching powders, etc. It

is also powerful dehydrating agent, having a strong affinity for water, and eating and corroding paper, wood, clothing, etc. It is thus used in the manufacture of ether, of imitation parchment, and of nitroglycerin. It is also used in etching iron, in removing iron scale from forgings, in petroleum refining, etc., and in general its manufacture is the most important and fundamental of all the chemical industries. Formerly called vitriolic acid, and now popularly vitriol, and oil of vitriol.
-- Fuming sulphuric acid, or Nordhausen sulphuric acid. See Disulphuric acid, under Disulphuric.
-- Sulphuric anhydride, sulphur trioxide. See under Sulphur.
-- Sulphuric ether, common anæsthetic ether; -- so called because made by the catalytic action of sulphuric acid on alcohol. See Ether, 3 (a).

2. (Chem.)
(a) Derived from, or containing, sulphur; specifically, designating those compounds in which the element has a lower valence as contrasted with the sulphuric compounds.
(b) Having the characteristic odor of sulphur dioxide, or of hydrogen sulphide, or of other sulphur compounds. Sulphurous acid. (a) Sulphur dioxide. See under Sulphur. [Obs.] (b) An acid, $H_2SO_3$, not known in the free state except as a solution of sulphur dioxide in water, but forming a well-known series of salts (the sulphites).
-- Sulphurous anhydride (Chem.), sulphur dioxide. See under Sulphur.

SULPHURWORT
Sul"phur*wort', n. (Bot.)

Defn: The hog's fennel. See under Fennel.

SULPHURY
Sul"phur*y, a.

Defn: Resembling, or partaking of the nature of, sulphur; having the qualities of sulphur.

SULPHURYL
Sul"phur*yl, n. Etym: [Sulphur + -yl.] (Chem.)

Defn: The hypothetical radical $SO_2$; -- called also sulphon. Sulphuryl chloride, a chloride, pungent, fuming liquid, $SO_2.Cl_2$, obtained by the action of phosphorus pentachloride on sulphur trioxide. On treatment with water it decomposes into sulphuric and hydrochloric acids, and is hence called also sulphuric chloranhydride.

SULPHYDRATE
Sul*phy"drate, n. (Chem.)

Defn: A compound, analogous to a hydrate, regarded as a salt of sulphydric acid, or as a derivative of hydrogen sulphide in which one half of the hydrogen is replaced by a base (as potassium sulphydrate, KSH), or as a hydrate in which the oxygen has been wholly or partially replaced by sulphur.

SULPHYDRIC
Sul*phy"dric, a. (Chem.)

Defn: Of, pertaining to, or designating, hydrogen sulphide, which is regarded as an acid, especially when in solution.

SULPICIAN
Sul*pi"cian, n. Etym: [So called after the parish of St. Sulpice in Paris, of which the founder, Jean Jacques Olier, was pastor in 1643.] (R. C. Ch.)

SUPERSTITION
Su'per*sti"tion, n. Etym: [F. superstition, L. superstitio, originally, a standing still over or by a thing; hence, amazement, wonder, dread, especially of the divine or supernatural, fr. superstare to stand over; super over + stare to stand. See Super-, and Stand.]

1. An excessive reverence for, or fear of, that which is unknown or mysterious.

2. An ignorant or irrational worship of the Supreme Deity; excessive exactness or rigor in religious opinions or practice; extreme and unnecessary scruples in the observance of religious rites not commanded, or of points of minor importance; also, a rite or practice proceeding from excess of sculptures in religion.
And the truth With superstitions and traditions taint. Milton.

3. The worship of a false god or gods; false religion; religious veneration for objects.
[The accusers] had certain questions against him of their own superstition. Acts xxv. 19.

4. Belief in the direct agency of superior powers in certain extraordinary or singular events, or in magic, omens, prognostics, or the like.

5. Excessive nicety; scrupulous exactness.

Syn.
 -- Fanaticism.
 -- Superstition, Fanaticism. Superstition springs from religious feeling misdirected or unenlightened. Fanaticism arises from this same feeling in a state of high-wrought and self-confident excitement. The former leads in some cases to excessive rigor in religious opinions or practice; in others, to unfounded belief in extraordinary events or in charms, omens, and prognostics, hence producing weak fears, or excessive scrupulosity as to outward observances. The latter gives rise to an utter disregard of reason under the false assumption of enjoying a guidance directly inspired. Fanaticism has a secondary sense as applied to politics, etc., which corresponds to the primary.

SWAN
Swan, n. Etym: [AS. swan; akin to D. zwaan, OHG. swan, G. schwan, Icel. svanr, Sw. svan, Dan. svane; and perhaps to E. sound something audible.]

1. (Zoöl.)

Defn: Any one of numerous species of large aquatic birds belonging to Cygnus, Olor, and allied genera of the subfamily Cygninæ. They have a large and strong beak and a long neck, and are noted for their graceful movements when swimming. Most of the northern species are white. In literature the swan was fabled to sing a melodious song, especially at the time of its death.

Note: The European white, or mute, swan (Cygnus gibbus), which is most commonly domesticated, bends its neck in an S-shaped curve. The whistling, or trumpeting, swans of the genus Olor do not bend the neck in an S-shaped curve, and are noted for their loud and sonorous cry, due to complex convolutions of the windpipe. To this genus belong the European whooper, or whistling swan (Olor cygnus), the American whistling swan (O. Columbianus), and the trumpeter swan (O. buccinator). The Australian black swan (Chenopis atrata) is dull black with white on the wings, and has the bill carmine, crossed with a white band. It is a very graceful species and is often domesticated. The South American black-necked swan (Sthenelides melancorypha) is a very beautiful and graceful species, entirely white, except the head and neck, which are dark velvety seal-brown. Its bill has a double bright rose-colored knob.

2. Fig.: An appellation for a sweet singer, or a poet noted for grace and melody; as Shakespeare is called the swan of Avon.

3. (Astron.)

Note: In crystallography, the symbol of a plane is the numerical expression which defines its position relatively to the assumed axes.

3. (Theol.)

Defn: An abstract or compendium of faith or doctrine; a creed, or a summary of the articles of religion.

4. Etym: [Gr.

Defn: That which is thrown into a common fund; hence, an appointed or accustomed duty. [Obs.]
They do their work in the days of peace . . . and come to pay their symbol in a war or in a plague. Jer. Taylor.

5. Share; allotment. [Obs.]
The persons who are to be judged . . . shall all appear to receive their symbol. Jer. Taylor.

6. (Chem.)

Defn: An abbreviation standing for the name of an element and consisting of the initial letter of the Latin or New Latin name, or sometimes of the initial letter with a following one; as, C for carbon, Na for sodium (Natrium), Fe for iron (Ferrum), Sn for tin (Stannum), Sb for antimony (Stibium), etc. See the list of names and symbols under Element.

Note: In pure and organic chemistry there are symbols not only for the elements, but also for their grouping in formulas, radicals, or residues, as evidenced by their composition, reactions, synthesis, etc. See the diagram of Benzene nucleus, under Benzene.

Syn.
 -- Emblem; figure; type. See Emblem.

SYMBOL
Sym"bol, v. t.

Defn: To symbolize. [R.] Tennyson.

SYMBOLIC
Sym*bol"ic, n. Etym: [Cf. F. symbolique. See Symbolic, a.] (Theol.)

2. A system of symbols or representations.

3. (Chem.)
(a) The practice of using symbols, or the system of notation developed thereby.
(b) A combining together of parts or ingredients. [Obs.]

4. (Theol.)

Defn: The science of creeds; symbolics.

SYMBOLIST
Sym"bol*ist, n.

Defn: One who employs symbols.

SYMBOLISTIC; SYMBOLISTICAL
Sym'bol*is"tic, Sym'bol*is"tic*al, a.

Defn: Characterized by the use of symbols; as, symbolistic poetry.

SYMBOLIZATION
Sym'bol*i*za"tion, n. Etym: [Cf. F. symbolisation.]

Defn: The act of symbolizing; symbolical representation. Sir T. Browne.

SYMBOLIZE
Sym"bol*ize, v. i. [imp. & p. p. Symbolized; p. pr. & vb. n. Symbolizing.] Etym: [Cf. F. symboliser.]

1. To have a resemblance of qualities or properties; to correspond; to harmonize.
The pleasing of color symbolizeth with the pleasing of any single tone to the ear; but the pleasing of order doth symbolize with harmony. Bacon.
They both symbolize in this, that they love to look upon themselves through multiplying glasses. Howell.

2. To hold the same faith; to agree. [R.]
The believers in pretended miracles have always previously symbolized with the performers of them. G. S. Faber.

3. To use symbols; to represent ideas symbolically.

SYMBOLIZE
Sym"bol*ize, v. t.

1. To make to agree in properties or qualities.

2. To make representative of something; to regard or treat as symbolic. "Some symbolize the same from the mystery of its colors." Sir T. Browne.

3. To represent by a symbol or symbols.

SYMBOLIZER
Sym"bol*i'zer, n.

Defn: One who symbolizes.

SYMBOLOGICAL
Sym'bo*log"i*cal, a.

Defn: Pertaining to a symbology; versed in, or characterized by, symbology.

SYMBOLOGIST
Sym*bol"o*gist, n.

Defn: One who practices, or who is versed in, symbology.

SYMBOLOGY
Sym*bol"o*gy, n. Etym: [Symbol + -logy.]

Defn: The art of expressing by symbols.

SYMBRANCHII
Sym*bran"chi*i, n. pl. Etym: [NL., fr. Gr. (Zoöl.)

Defn: An order of slender eel-like fishes having the gill openings confluent beneath the neck. The pectoral arch is generally attached to the skull, and the entire margin of the upper jaw is formed by the premaxillary. Called also Symbranchia.

SYMMETRAL
Sym"me*tral, a.

Defn: Commensurable; symmetrical. [Obs.] Dr. H. More.

SYMMETRIAN
Sym*me"tri*an, n.

Defn: One eminently studious of symmetry of parts. [R.] Sir P. Sidney.

SYMMETRIC
Sym*met"ric, a.

Defn: Symmetrical.

SYMMETRICAL
Sym*met"ric*al, a. Etym: [Cf. F. symétrique. See Symmetry.]

1. Involving or exhibiting symmetry; proportional in parts; having its parts in due proportion as to dimensions; as, a symmetrical body or building.

2. (Biol.)

Defn: Having the organs or parts of one side corresppondING with those of the other; having the parts in two or more series of organs the same in number; exhibiting a symmetry.See Symmetry, 2.

3. (Bot.)
(a) Having an equal number of parts in the successive circles of floral organs; -- said of flowers.
(b) Having a likeness in the form and size of floral organs of the same kind; regular.

4. (Math.)

Defn: Having a common measure; commensurable.
(b) Having corresponding parts or relations.

Note: A curve or a plane figure is symmetrical with respect to a given line, and a line, surface, or solid with respect to a plane, when for each point on one side of the line or plane there is a corresponding point on the other side, so situated that the line joining the two corresponding points is perpendicular to the line or plane and is bisectad by it. Two solids are symmetrical when they are so situate dwith the respect to an intervening plane that the several points of their surfaces thus correspond to each other in position and distance. In analysis, an expression is symmetrical with respect to several letters when any two of them may change places without affecting the expression; as, the expression a2b + ab2 + a2c + ac2 + b2c + bc2, is symmetrical with respect to the letters a, b, c.
-- Sym*met"ric*al*ly, adv.
-- Sym*met"ric*al*ness, n.

SYMMETRICIAN
Sym‘me*tri"cian, n.

Defn: Same as Symmetrian. [R.] Holinshed.

SYMMETRIST
Sym"me*trist, n.

Defn: One eminently studious of symmetry of parts. Sir H. Wotton.

SYMMETRIZE
Sym"me*trize, v. t. [imp. & p. p. Symmetrized; p. pr. & vb. n. Symmetrizing.] Etym: [Cf. F. symétriser.]

Defn: To make proportional in its parts; to reduce to symmetry. Burke.

SYMMETRY
Sym"me*try, n. Etym: [L. symmetria, Gr. symétrie. See Syn-, and Meter rhythm.]

1. A due proportion of the several parts of a body to each other; adaptation of the form or dimensions of the several parts of a thing to each other; the union and conformity of the members of a work to the whole.

2. (Biol.)

Defn: The law of likeness; similarity of structure; regularity in form and arrangement; orderly and similar distribution of parts, such that an animal may be divided into parts which are structurally symmetrical.

Note: Bilateral symmetry, or two-sidedness, in vertebrates, etc., is that in which the body can be divided into symmetrical halves by a vertical plane passing through the middle; radial symmetry, as in echinoderms, is that in which the individual parts are arranged symmetrically around a central axis; serial symmetry, or zonal symmetry, as in earthworms, is that in which the segments or metameres of the body are disposed in a zonal manner one after the other in a longitudinal axis. This last is sometimes called metamerism.

3. (Bot.)
(a) Equality in the number of parts of the successive circles in a flower.
(b) Likeness in the form and size of floral organs of the same kind; regularity. Axis of symmetry. (Geom.) See under Axis.
-- Respective symmetry, that disposition of parts in which only the opposite sides are equal to each other.

SYMPATHETIC
Sym'pa*thet"ic, a. Etym: [See Sympathy, and cf. Pathetic.]

1. Inclined to sympathy; sympathizing.
Far wiser he, whose sympathetic mind Exults in all the good of all mankind. Goldsmith.

2. Produced by, or expressive of, sympathy.
Ope the sacred source of sympathetic tears. Gray.

3. (Physiol.)
(a) Produced by sympathy; -- applied particularly to symptoms or affections. See Sympathy.
(b) Of or relating to the sympathetic nervous system or some of its

branches; produced by stimulation on the sympathetic nervious system or some part of it; as, the sympathetic saliva, a modified form of saliva, produced from some of the salivary glands by stimulation of a sympathetic nerve fiber. Sympathetic ink. (Chem.) See under Ink.
-- Sympathetic nerve (Anat.), any nerve of the sympathetic system; especially, the axial chain of ganglions and nerves belonging to the sympathetic system.
-- Sympathetic powder (Alchemy), a kind of powder long supposed to be able to cure a wound if applied to the weapon that inflicted it, or even to a portion of the bloody clothes. Dunglison.
-- Sympathetic sounds (Physics), sounds produced from solid bodies by means of vibrations which have been communicated to them from some other sounding body, by means of the air or an intervening solid.
-- Sympathetic system (Anat.), a system of nerves and nerve ganglions connected with the alimentary canal, the vascular system, and the glandular organs of most vertebrates, and controlling more or less their actions. The axial part of the system and its principal ganglions and nerves are situated in the body cavity and form a chain of ganglions on each side of the vertebral column connected with numerous other ganglions and nerve plexuses.

SYMPATHETICAL
Sym'pa*thet"ic*al, a.

Defn: Sympathetic.

SYMPATHETICALLY
Sym'pa*thet"ic*al*ly, adv.

Defn: In a sympathetic manner.

SYMPATHIST
Sym"pa*thist, n.

Defn: One who sympathizes; a sympathizer. [R.] Coleridge.

SYMPATHIZE
Sym"pa*thize, v. i. [imp. & p. p. Sympathized; p. pr. & vb. n. Sympathizing.] Etym: [F. sympathiser. See Sympathy.]

1. To have a common feeling, as of bodily pleasure or pain.
The mind will sympathize so much with the anguish and debility of the body, that it will be too distracted to fix itself in meditation. Buckminster.

2. To feel in consequence of what another feels; to be affected by feelings similar to those of another, in consequence of knowing the person to be thus affected.
Their countrymen . . . sympathized with their heroes in all their adventures. Addison.

3. To agree; to be in accord; to harmonize. Dryden.

SYMPATHIZE
Sym"pa*thize, v. t.

SYMPATHIZER
Sym"pa*thi'zer, n.

Defn: One who sympathizes.

SYMPATHY
Sym"pa*thy, n.; pl. Sympathies. Etym: [F. sympathie, L. sympathia, Gr. Syn-, and Pathos.]

1. Feeling corresponding to that which another feels; the quality of being affected by the affection of another, with feelings correspondent in kind, if not in degree; fellow-feeling.
They saw, but other sight instead -- a crowd Of ugly serpents! Horror on them fell, And horrid sympathy. Milton.

2. An agreement of affections or inclinations, or a conformity of natural temperament, which causes persons to be pleased, or in accord, with one another; as, there is perfect sympathy between them.

3. Kindness of feeling toward one who suffers; pity; commiseration; compassion.
I value myself upon sympathy, I hate and despise myself for envy. Kames.

4. (Physiol.)
(a) The reciprocal influence exercised by the various organs or parts of the body on one another, as manifested in the transmission of a disease by unknown means from one organ to another quite remote, or in the influence exerted by a diseased condition of one part on another part or organ, as in the vomiting produced by a tumor of the brain.
(b) That relation which exists between different persons by which one of them produces in the others a state or condition like that of himself. This is shown in the tendency to yawn which a person often feels on seeing another yawn, or the strong inclination to become hysteric experienced by many women on seeing another person suffering with hysteria.

5. A tendency of inanimate things to unite, or to act on each other; as, the sympathy between the loadstone and iron. [R.]

6. Similarity of function, use office, or the like.
The adverb has most sympathy with the verb. Earle.

Syn.
-- Pity; fellow-feeling; compassion; commiseration; tenderness; condolence; agreement.
-- Sympathy, Commiseration. Sympathy is literally a fellow-feeling with others in their varied conditions of joy or of grief. This term, however, is now more commonly applied to a fellow-feeling with others under affliction, and then coincides very nearly with commiseration. In this case it is commonly followed by for; as, to feel sympathy for a friend when we see him distressed. The verb sympathize is followed by with; as, to sympathize with a friend in his distresses or enjoyments. "Every man would be a distinct species to himself, were there no sympathy among individuals." South. See Pity.
Fault, Acknowledged and deplored, in Adam wrought Commiseration. Milton.

SYMPETALOUS
Sym*pet"al*ous, a. Etym: [Pref. sym- + petal.] (Bot.)

Defn: Having the petals united; gamopetalous.

SYMPHONIC

Sym*phon"ic, a.

1. Symphonious.

2. (Mus.)

Defn: Relating to, or in the manner of, symphony; as, the symphonic form or style of composition.

SYMPHONIOUS

Followed with acclamation and the sound Symphonious of ten thousand harps. Milton.

2. (Mus.)

Defn: Symphonic.

SYMPHONIST
Sym"pho*nist, n. Etym: [Cf. F. symphoniste.]

Defn: A composer of symphonies.

SYMPHONIZE
Sym"pho*nize, v. i. [imp. & p. p. Symphonized; p. pr. & vb. n. Symphonizing.]

Defn: To agree; to be in harmony. [R.] Boyle.

SYMPHONY
Sym"pho*ny, n.; pl. Symphonies. Etym: [F. symphonie (cf. It. sinfonia), L. symphonia, Gr. Phonetic.]

1. A consonance or harmony of sounds, agreeable to the ear, whether the sounds are vocal or instrumental, or both.
The trumpets sound, And warlike symphony in heard around. Dryden.

2. A stringed instrument formerly in use, somewhat resembling the virginal.
With harp and pipe and symphony. Chaucer.

3. (Mus.)
(a) An elaborate instrumental composition for a full orchestra, consisting usually, like the sonata, of three or four contrasted yet inwardly related movements, as the allegro, the adagio, the minuet and trio, or scherzo, and the finale in quick time. The term has recently been applied to large orchestral works in freer form, with arguments or programmes to explain their meaning, such as the "symphonic poems" of Liszt. The term was formerly applied to any composition for an orchestra, as overtures, etc., and still earlier, to certain compositions partly vocal, partly instrumental.
(b) An instrumental passage at the beginning or end, or in the course of, a vocal composition; a prelude, interlude, or postude; a ritornello.

SYMPHYLA
Sym*phy"la, n. pl. Etym: [NL., fr. Gr. (Zoöl.)

SYMPHYSEOTOMY
Sym'phy*se*ot"o*my, n. Etym: [NL. symphysis pubis + Gr. (Surg.)

Defn: The operation of dividing the symphysis pubis for the purpose of facilitating labor; -- formerly called the Sigualtian section. [Written also symphysotomy.] Dunglison.

SYMPHYSIS
Sym"phy*sis, n.; pl. Symphyses. Etym: [NL., fr. Gr. (Anat.)
(a) An articulation formed by intervening cartilage; as, the pubic symphysis.
(b) The union or coalescence of bones; also, the place of union or coalescence; as, the symphysis of the lower jaw. Cf. Articulation.

SYMPHYSOTOMY
Sym'phy*sot"o*my, n.

Defn: Symphyseotomy.

SYMPHYTISM
Sym"phy*tism, n. Etym: [Gr.

Defn: Coalescence; a growing into one with another word. [R.]
Some of the phrasal adverbs have assumed the form of single words, by that symphytism which naturally attaches these light elements to each other. Earle.

SYMPIESOMETER
Sym'pi*e*som"e*ter, n. Etym: [Gr. -meter.]

Defn: A sensitive kind of barometer, in which the pressure of the atmosphere, acting upon a liquid, as oil, in the lower portion of the instrument, compresses an elastic gas in the upper part.

Note: The column of oil of a lower part BC of a glass tube compresses hydrogen gas in the upper part AB, and is thus measured on the scale pq by the position of a surface of the oil in the tube. The scale pq is adjustable, and its index must be set to the division on the scale rs corresponding to the temperature indicated by the termometer t, in order to correct for the effects of temperature on the gas. It is sensitive, and convenient for use at sea, but inferior in accuracy to the mercurial barometer.

SYMPLECTIC
Sym*plec"tic, a. Etym: [Gr. (Anat.)

Defn: Plaiting or joining together; -- said of a bone next above the quadrate in the mandibular suspensorium of many fishes, which unites together the other bones of the suspensorium.

-- Syn*on"y*mous*ly, adv.
These words consist of two propositions, which are not distinct in sense, but one and the same thing variously expressed; for wisdom and understanding are synonymous words here. Tillotson.

Syn.
-- Identical; interchangeable.
-- Synonymous, Identical. If no words are synonymous except those which are identical in use and meaning, so that the one can in all cases be substituted for the other, we have scarcely ten such words in our language. But the term more properly denotes that the words in

question approach so near to each other, that, in many or most cases, they can be used interchangeably. 1. Words may thus coincide in certain connections, and so be interchanged, when they can not be interchanged in other connections; thus we may speak either strength of mind or of force of mind, but we say the force (not strength) of gravitation. 2. Two words may differ slightly, but this difference may be unimportant to the speaker’s object, so that he may freely interchange them; thus it makes but little difference, in most cases, whether we speak of a man’s having secured his object or having attained his object. For these and other causes we have numerous words which may, in many cases or connections, be used interchangeably, and these are properly called synonyms. Synonymous words "are words which, with great and essential resemblances of meaning, have, at the same time, small, subordinate, and partial differences, -- these differences being such as either originally and on the ground of their etymology inhered in them; or differences which they have by usage acquired in the eyes of all; or such as, though nearly latent now, they are capable of receiving at the hands of wise and discreet masters of the tongue. Synonyms are words of like significance in the main, but with a certain unlikeness as well." Trench.

TALLY
Tal"ly, n.; pl. Tallies. Etym: [OE. taile, taille, F. taille a cutting, cut tally, fr. tailler to cut, but influenced probably by taillé, p.p. of tailler. See Tailor, and cf. Tail a limitation, Taille, Tallage.]

1. Originally, a piece of wood on which notches or scores were cut, as the marks of number; later, one of two books, sheets of paper, etc., on which corresponding accounts were kept.

Note: In purshasing and selling, it was once customary for traders to have two sticks, or one stick cleft into two parts, and to mark with a score or notch, on each, the number or quantity of goods delivered, -- the seller keeping one stick, and the purchaser the other. Before the use of writing, this, or something like it, was the only method of keeping accounts; and tallies were received as evidence in courts of justice. In the English exchequer were tallies of loans, one part being kept in the exchequer, the other being given to the creditor in lieu of an obligation for money lent to government.

2. Hence, any account or score kept by notches or marks, whether on wood or paper, or in a book; especially, one kept in duplicate.

3. One thing made to suit another; a match; a mate.
They were framed the tallies for each other. Dryden.

4. A notch, mark, or score made on or in a tally; as, to make or earn a tally in a game.

5. A tally shop. See Tally shop, below. Tally shop, a shop at which goods or articles are sold to customers on account, the account being kept in corresponding books, one called the tally, kept by the buyer, the other the counter tally, kept by the seller, and the payments being made weekly or otherwise by agreement. The trade thus regulated is called tally trade. Eng. Encyc.
-- To strike tallies, to act in correspondence, or alike. [Obs.] Fuller.

2. A particular sensation excited by the application of a substance to the tongue; the quality or savor of any substance as perceived by means of the tongue; flavor; as, the taste of an orange or an apple; a bitter taste; an acid taste; a sweet taste.

3. (Physiol.)

Defn: The one of the five senses by which certain properties of bodies (called their taste, savor, flavor) are ascertained by contact with the organs of taste.

Note: Taste depends mainly on the contact of soluble matter with the terminal organs (connected with branches of the glossopharyngeal and other nerves) in the papillæ on the surface of the tongue. The base of the tongue is considered most sensitive to bitter substances, the point to sweet and acid substances.

4. Intellectual relish; liking; fondness; -- formerly with of, now with for; as, he had no taste for study.
I have no taste Of popular applause. Dryden.

5. The power of perceiving and relishing excellence in human performances; the faculty of discerning beauty, order, congruity, proportion, symmetry, or whatever constitutes excellence, particularly in the fine arts and belles-letters; critical judgment; discernment.

7. Essay; trial; experience; experiment. Shak.

8. A small portion given as a specimen; a little piece tastted of eaten; a bit. Bacon.

9. A kind of narrow and thin silk ribbon.

Syn.
 -- Savor; relish; flavor; sensibility; gout.
 -- Taste, Sensibility, Judgment. Some consider taste as a mere

sensibility, and others as a simple exercise of judgment; but a union of both is requisite to the existence of anything which deserves the name. An original sense of the beautiful is just as necessary to æsthetic judgments, as a sense of right and wrong to the formation of any just conclusions or moral subjects. But this "sense of the beautiful" is not an arbitrary principle. It is under the guidance of reason; it grows in delicacy and correctness with the progress of the individual and of society at large; it has its laws, which are seated in the nature of man; and it is in the development of these laws that we find the true "standard of taste."
What, then, is taste, but those internal powers, Active and strong, and feelingly alive To each fine impulse a discerning sense Of decent and sublime, with quick disgust From things deformed, or disarranged, or gross In species This, nor gems, nor stores of gold, Nor purple state, nor culture, can bestow, But God alone, when first his active hand Imprints the secret bias of the soul. Akenside.
Taste of buds, or Taste of goblets (Anat.), the flask-shaped end organs of taste in the epithelium of the tongue. They are made up of modified epithelial cells arranged somewhat like leaves in a bud.

TEA
Tea, n. Etym: [Chin. tsha, Prov. Chin. te: cf. F. thé.]

1. The prepared leaves of a shrub, or small tree (Thea, or Camellia, Chinensis). The shrub is a native of China, but has been introduced to some extent into some other countries.

Note: Teas are classed as green or black, according to their color or appearance, the kinds being distinguished also by various other characteristic differences, as of taste, odor, and the like. The color, flavor, and quality are dependent upon the treatment which the leaves receive after being gathered. The leaves for green tea are heated, or roasted slightly, in shallow pans over a wood fire, almost immediately after being gathered, after which they are rolled with the hands upon a table, to free them from a portion of their moisture, and to twist them, and are then quickly dried. Those intended for black tea are spread out in the air for some time after being gathered, and then tossed about with the hands until they become soft and flaccid, when they are roasted for a few minutes, and rolled, and having then been exposed to the air for a few hours in a soft and moist state, are finally dried slowly over a charcoal fire. The operation of roasting and rolling is sometimes repeated several times, until the leaves have become of the proper color. The principal sorts of green tea are Twankay, the poorest kind; Hyson skin, the refuse of Hyson; Hyson, Imperial, and Gunpowder, fine varieties; and Young Hyson, a choice kind made from young leaves gathered early in the spring. Those of black tea are Bohea, the poorest kind; Congou; Oolong; Souchong, one of the finest varieties; and Pekoe, a fine-flavored kind, made chiefly from young spring buds. See Bohea, Congou, Gunpowder tea, under Gunpowder, Hyson, Oolong, and Souchong. K. Johnson. Tomlinson.

Note: "No knowledge of . . . [tea] appears to have reached Europe till after the establishment of intercourse between Portugal and China in 1517. The Portuguese, however, did little towards the introduction of the herb into Europe, and it was not till the Dutch established themselves at Bantam early in 17th century, that these adventurers learned from the Chinese the habit of tea drinking, and brought it to Europe." Encyc. Brit.

2. A decoction or infusion of tea leaves in boiling water; as, tea is a common beverage.

3. Any infusion or decoction, especially when made of the dried leaves of plants; as, sage tea; chamomile tea; catnip tea.

TELEGRAPH
Tel"e*graph, n. Etym: [Gr. toli) + -graph: cf. F. télégraphe. See Graphic.]

Defn: An apparatus, or a process, for communicating intelligence rapidly between distant points, especially by means of preconcerted visible or audible signals representing words or ideas, or by means of words and signs, transmitted by electrical action.

Note: The instruments used are classed as indicator, type-printing, symbol-printing, or chemical-printing telegraphs, according as the intelligence is given by the movements of a pointer or indicator, as in Cooke & Wheatstone’s (the form commonly used in England), or by impressing, on a fillet of paper, letters from types, as in House’s and Hughe’s, or dots and marks from a sharp point moved by a magnet, as in Morse’s, or symbols produced by electro-chemical action, as in Bain’s. In the offices in the United States the recording instrument is now little used, the receiving operator reading by ear the combinations of long and short intervals of sound produced by the armature of an electro-magnet as it is put in motion by the opening and breaking of the circuit, which motion, in registering instruments, traces upon a ribbon of paper the lines and dots used to represent the letters of the alphabet. See Illustration in Appendix.
Acoustic telegraph. See under Acoustic.
-- Dial telegraph, a telegraph in which letters of the alphabet and numbers or other symbols are placed upon the border of a circular dial plate at each station, the apparatus being so arranged that the needle or index of the dial at the receiving station accurately

copies the movements of that at the sending station.

-- Electric telegraph, or Electro-magnetic telegraph, a telegraph in which an operator at one station causes words or signs to be made at another by means of a current of electricity, generated by a battery and transmitted over an intervening wire.

-- Facsimile telegraph. See under Facsimile.

-- Indicator telegraph. See under Indicator.

-- Pan-telegraph, an electric telegraph by means of which a drawing or writing, as an autographic message, may be exactly reproduced at a distant station.

-- Printing telegraph, an electric telegraph which automatically prints the message as it is received at a distant station, in letters, not signs.

-- Signal telegraph, a telegraph in which preconcerted signals, made by a machine, or otherwise, at one station, are seen or heard and interpreted at another; a semaphore.

-- Submarine telegraph cable, a telegraph cable laid under water to connect stations separated by a body of water.

-- Telegraph cable, a telegraphic cable consisting of several conducting wires, inclosed by an insulating and protecting material, so as to bring the wires into compact compass for use on poles, or to form a strong cable impervious to water, to be laid under ground, as in a town or city, or under water, as in the ocean.

-- Telegraph plant (Bot.), a leguminous plant (Desmodium gyrans) native of the East Indies. The leaflets move up and down like the signals of a semaphore.

TELEGRAPH
Tel"e*graph, v. t. [imp. & p. p. Telegraphed; p. pr. & vb. n. Telegraphing.] Etym: [F. télégraphier.]

Defn: To convey or announce by telegraph.

TELEGRAPHER
Te*leg"ra*pher, n.

Defn: One who sends telegraphic messages; a telegraphic operator; a telegraphist.

TELEGRAPHIC
Tel‘e*graph"ic, a. Etym: [Cf. F. télégraphique.]

Defn: Of or pertaining to the telegraph; made or communicated by a telegraph; as, telegraphic signals; telegraphic art; telegraphic intelligence.

TELEGRAPHICAL
Tel‘e*graph"ic*al, a.

Defn: Telegraphic.
-- Tel‘e*graph"ic*al*ly, adv.

TELEGRAPHIST
Te*leg"ra*phist, n.

Defn: One skilled in telegraphy; a telegrapher.

TELEGRAPHONE
Te*leg"ra*phone, n. [Gr. th e far + -graph +  sound.]

Defn: An instrument for recording and reproducing sound by local magnetization of a steel wire, disk, or ribbon, moved against the pole of a magnet connected electrically with a telephone receiver, or the like.

TELEGRAPHOSCOPE
Tel‘e*graph"o*scope, n. [Gr. th e  far + -graph + -scope.]

Defn: An instrument for telegraphically transmitting a picture and reproducing its image as a positive or negative. The transmitter includes a camera obscura and a row of minute selenium cells. The receiver includes an oscillograph, ralay, equilibrator, and an induction coil the sparks from which perforate a paper with tiny holes that form the image.

TELEGRAPH PLANT
Telegraph plant.

Defn: An East Indian tick trefoil (Meibomia gyrans), whose lateral leaflets jerk up and down like the arms of a semaphore, and also rotate on their axes.

TELEGRAPHY
Te*leg"ra*phy, n. Etym: [Cf. F. télégraphie.]

Defn: The science or art of constructing, or of communicating by means of, telegraphs; as, submarine telegraphy.

TELEHYDROBAROMETER
Tel‘e*hy‘dro*ba*rom"e*ter, n. [Gr. th e far + hydrobarometer.]

Defn: An instrument for indicating the level of water in a distant tank or reservior.

TELE-ICONOGRAPH
Tel‘e-i*con"o*graph, n. [Gr. th e far + iconograph.]

1. An instrument essentially the same as the telemetrograph.

2.  A form of facsimile telegraph.

TEL-EL-AMARNA
Tel‘-el-A*mar"na, n. [Ar., hill of Amarna.]

Defn: A station on the Nile, midway between Thebes and Memphis, forming the site of the capital of Amenophis IV., whose archive chamber was discovered there in 1887. A collection of tablets (called the Tel-el-Amarna, or the Amarna, tablets) was found here, forming the Asiatic correspondence (Tel-el-Amarna letters) of Amenophis IV. and his father, Amenophis III., written in cuneiform characters. It is an important source of our knowledge of Asia from about 1400 to 1370 b. c..

TELELECTRIC
Tel‘e*lec"tric, a. [Gr. th e far + electric.] (Elec.)

Defn: Of or pertaining to transmission, as of music, to a distance by electricity.

TELELECTROSCOPE
Tel‘e*lec"tro*scope, n. [Gr. th e far + electro- + -scope.]

Defn: Any apparatus for making distant objects visible by the aid of electric transmission.

TELEMECHANIC

Tel'e*me*chan"ic, a. [Gr. th e far + mechanic.]

Defn: Designating, or pert. to, any device for operating mechanisms at a distance. --Tel'e*mech"a*nism (#), n.

TELEMETEOROGRAPH
Tel'e*me'te*or"o*graph, n. [Gr. th e far + meteorograph.]

Defn: Any apparatus recording meteorological phenomena at a distance from the measuring apparatus, as by electricity or by compressed air; esp., an apparatus recording conditions at many distant stations at a central office. -- Tel'e*me'te*or*o*graph"ic (#), a.

TELEMETER
Te*lem"e*ter, n. Etym: [Gr. -meter.]

Defn: An instrument used for measuring the distance of an object from an observer; as, a telescope with a micrometer for measuring the apparent diameter of an object whose real dimensions are known.

TELEMETROGRAPH
Tel'e*met"ro*graph, n. [Gr. th e far + me'tron measure + -graph.]

Defn: A combination of the camera lucida and telescope for drawing and measuring distant objects. -- Tel'e*me*trog"ra*phy (#), n. -- Tel'e*met'ro*graph"ic (#), a.

TELEMOTOR
Tel'e*mo"tor, n. [Gr. th e far + motor.] (Naut.)

Defn: A hydraulic device by which the movement of the wheel on the bridge operates the steering gear at the stern.

TELENERGY
Tel*en"er*gy, n. [Gr. th e far + energy.]

Defn: Display of force or energy at a distance, or without contact; -- applied to mediumistic phenomena. -- Tel'en*er"gic (#), a.

TELENGISCOPE
Te*len"gi*scope, n. [Gr. th e far +  near + -scope.] (Optics)

Defn: An instrument of such focal length that it may be used as an observing telescope for objects close at hand or as a long-focused microscope.

TELEOCEPHIAL
Te'le*o*ceph"i*al, n. pl. Etym: [NL., fr. Gr. (Zoöl.)

Defn: An extensive order of bony fishes including most of the common market species, as bass, salmon, cod, perch, etc.

TELEOLOGICAL
Te'le*o*log"ic*al, a. Etym: [Cf. F. téléologique.] (Biol.)

Defn: Of or pertaining to teleology, or the doctrine of design.
-- Te'le*o*log"ic*al*ly, adv.

TELEOLOGIST
Te'le*ol"o*gist, n. (Biol.)

Defn: One versed in teleology.

TELEOLOGY
Te'le*ol"o*gy, n. Etym: [Gr. teleos, the end or issue + -logy: cf. F. téléologie.]

Defn: The doctrine of the final causes of things; specif. (Biol.),

Defn: the doctrine of design, which assumes that the phenomena of organic life, particularly those of evolution, are explicable only by purposive causes, and that they in no way admit of a mechanical explanation or one based entirely on biological science; the doctrine of adaptation to purpose.

TELEOPHORE
Te"le*o*phore', n. Etym: [Gr. teleos complete + (Zoöl.)

Defn: Same as Gonotheca.

TELEORGANIC
Te'le*or*gan"ic, a. Etym: [Gr. teleos complete + E. organic.] (Physiol.)

Defn: Vital; as, teleorganic functions.

TELEOSAUR
Te'le*o*saur", n. (Paleon.)

Defn: Any one of several species of fossil suarians belonging to Teleosaurus and allied genera. These reptiles are related to the crocodiles, but have biconcave vertebræ.

TELEOSAURUS
Te'le*o*sau"rus, n. Etym: [NL., fr. Gr. (Paleon.)

Defn: A genus of extinct crocodilian reptiles of the Jurassic period, having a long and slender snout.

TELEOST
Te"le*ost, n. Etym: [Gr. (Zoöl.)

Defn: One of the Teleosti. Also used adjectively.

TELEOSTEAN
Te'le*os"te*an, a. (Zoöl.)

Defn: Of or pertaining to the teleosts.
 -- n.

Defn: A teleostean fish.

TELEOSTEI
Te'le*os"te*i, n. pl. Etym: [NL., fr. Gr. (Zoöl.)

Defn: A subclass of fishes including all the ordinary bony fishes as distinguished from the ganoids.

TELEOSTOMI
Te"le*os'to*mi, n. pl. Etym: [NL., fr. Gr. (Zoöl.)

Defn: An extensive division of fishes including the ordinary fishes (Teleostei) and the ganoids.

TELEOZOIC
Te'le*o*zo"ic, a. (Zoöl.)

Defn: Having tissued composed of cells.

TELEOZOON; TELEOZOOEN
Te*le*o*zo"ön, n. (Zoöl.)

Defn: A metazoan.

TELEPATHY
Te*lep"a*thy, n. Etym: [Gr.

Defn: The sympathetic affection of one mind by the thoughts, feelings, or emotions of another at a distance, without communication through the ordinary channels of sensation.
 -- Tel‘e*path"ic, a.
 -- Te*lep"a*thist, n.

TELEPHEME
Tel"e*pheme, n. Etym: [Gr.

Defn: A message by a telephone. [Recent]

TELEPHONE
Tel"e*phone, n. Etym: [Gr. (Physics)

Defn: An instrument for reproducing sounds, especially articulate speech, at a distance.

Note: The ordinary telephone consists essentially of a device by which currents of electricity, produced by sounds through the agency of certain mechanical devices and exactly corresponding in duration and intensity to the vibrations of the air which attend them, are transmitted to a distant station, and there, acting on suitable mechanism, reproduce similar sounds by repeating the vibrations. The necessary variations in the electrical currents are usually produced by means of a microphone attached to a thin diaphragm upon which the voice acts, and are intensified by means of an induction coil. In the magnetic telephone, or magneto-telephone, the diaphragm is of soft iron placed close to the pole of a magnet upon which is wound a coil of fine wire, and its vibrations produce corresponding vibrable currents in the wire by induction. The mechanical, or string, telephone is a device in which the voice or sound causes vibrations in a thin diaphragm, which are directly transmitted along a wire or string connecting it to a similar diaphragm at the remote station, thus reproducing the sound. It does not employ electricity.

TELEPHONE
Tel"e*phone, v. t.

Defn: To convey or announce by telephone.

TELEPHONE EXCHANGE
Tel‘e*phone ex*change".

Defn: A central office in which the wires of telephones may be connected to permit conversation.

TELEPHONIC
Tel‘e*phon"ic, a. Etym: [Cf. F. téléphonique. See Telephone.]

1. Conveying sound to a great distance.

2. Of or pertaining to the telephone; by the telephone.

TELEPHONICALLY
Tel'e*phon"ic*al*ly, adv.

Defn: By telephonic means or processes; by the use of the telephone.

TELEPHONY
Te*leph"o*ny, n.

Defn: The art or process of reproducing sounds at a distance, as with the telephone.

TELEPHOTE
Tel"e*phote, n. [Gr. th e far + fw^s, fwto's, light.]

Defn: A telelectric apparatus for producing images of visible objects at a distance.

TELEPHOTO
Tel'e*pho"to, a.

Defn: Telephotographic; specif., designating a lens consisting of a combination of lenses specially designed to give a large image of a distant object in a camera of relatively short focal length.

TELEPHOTOGRAPH
Tel'e*pho"to*graph, n. [Gr. th e far + photograph.]

Defn: A photograph, image, or impression, reproduced by or taken with a telephotographic apparatus.

TELEPHOTOGRAPHIC
Tel'e*pho'to*graph"ic, a.

Defn: Designating, or pertaining to, the process of telephotography.

TELEPHOTOGRAPHY
Tel'e*pho*tog"ra*phy, n.

1. The photography of distant objects in more enlarged form than is possible by the ordinary means, usually by a camera provided with a telephoto lens or mounted in place of the eyepiece of a telescope, so that the real or a magnified image falls on the sensitive plate.

2. Art or process of electrically transmitting and reproducing photographic or other pictures at a distance by methods similar to those used in electric telegraphy.

3. Less properly, phototelegraphy.

TELEPOLARISCOPE
Tel'e*po*lar"i*scope, n. Etym: [Gr. polariscope.] (Opt.)

Defn: A polariscope arranged to be attached to a telescope. Lockyer.

TELERYTHIN
Tel'e*ryth"in, n. Etym: [Gr. erythrin.] (Chem.)

Defn: A red crystalline compound related to, or produced from, erythrin. So called because regarded as the end of the series of erythrin compounds.

TELESCOPE

Tel"e*scope, n. Etym: [Gr. télescope. See Telegraph, and -scope.]

Defn: An optical instrument used in viewing distant objects, as the heavenly bodies.

Note: A telescope assists the eye chiefly in two ways; first, by enlarging the visual angle under which a distant object is seen, and thus magnifying that object; and, secondly, by collecting, and conveying to the eye, a larger beam of light than would enter the naked organ, thus rendering objects distinct and visible which would otherwise be indistinct and or invisible. Its essential parts are the object glass, or concave mirror, which collects the beam of light, and forms an image of the object, and the eyeglass, which is a microscope, by which the image is magnified. Achromatic telescope. See under Achromatic.
-- Aplanatic telescope, a telescope having an aplanatic eyepiece.
-- Astronomical telescope, a telescope which has a simple eyepiece so constructed or used as not to reverse the image formed by the object glass, and consequently exhibits objects inverted, which is not a hindrance in astronomical observations.
-- Cassegrainian telescope, a reflecting telescope invented by Cassegrain, which differs from the Gregorian only in having the secondary speculum convex instead of concave, and placed nearer the large speculum. The Cassegrainian represents objects inverted; the Gregorian, in their natural position. The Melbourne telescope (see Illust. under Reflecting telescope, below) is a Cassegrainian telescope.
-- Dialytic telescope. See under Dialytic. Equatorial telescope. See the Note under Equatorial.
-- Galilean telescope, a refracting telescope in which the eyeglass is a concave instead of a convex lens, as in the common opera glass. This was the construction originally adopted by Galileo, the inventor of the instrument. It exhibits the objects erect, that is, in their natural positions.
-- Gregorian telescope, a form of reflecting telescope. See under Gregorian.
-- Herschelian telescope, a reflecting telescope of the form invented by Sir William Herschel, in which only one speculum is employed, by means of which an image of the object is formed near one side of the open end of the tube, and to this the eyeglass is applied directly.
-- Newtonian telescope, a form of reflecting telescope. See under Newtonian.
-- Photographic telescope, a telescope specially constructed to make photographs of the heavenly bodies.
-- Prism telescope. See Teinoscope.
-- Reflecting telescope, a telescope in which the image is formed by a speculum or mirror (or usually by two speculums, a large one at the lower end of the telescope, and the smaller one near the open end) instead of an object glass. See Gregorian, Cassegrainian, Herschelian, and Newtonian, telescopes, above.
-- Refracting telescope, a telescope in which the image is formed by refraction through an object glass.
-- Telescope carp (Zoöl.), the telescope fish.
-- Telescope fish (Zoöl.), a monstrous variety of the goldfish having very protuberant eyes.
-- Telescope fly (Zoöl.), any two-winged fly of the genus Diopsis, native of Africa and Asia. The telescope flies are remarkable for having the eyes raised on very long stalks.
-- Telescope shell (Zoöl.), an elongated gastropod (Cerithium telescopium) having numerous flattened whorls.
-- Telescope sight (Firearms), a slender telescope attached to the barrel, having cross wires in the eyepiece and used as a sight.

-- Terrestrial telescope, a telescope whose eyepiece has one or two lenses more than the astronomical, for the purpose of inverting the image, and exhibiting objects erect.

TELESCOPE
Tel"e*scope, a. [imp. & p. p. Telescoped; p. pr. & vb. n. Telescoping.]

Defn: To slide or pass one within another, after the manner of the sections of a small telescope or spyglass; to come into collision, as railway cars, in such a manner that one runs into another. [Recent]

TELESCOPE
Tel"e*scope, v. t.

Defn: To cause to come into collision, so as to telescope. [Recent]

TELESCOPE BAG
Telescope bag.

Defn: An adjustable traveling bag consisting of two cases, the larger slipping over the other.

TELESCOPIC; TELESCOPICAL
Tel‘e*scop"ic, Tel‘e*scop"ic*al, a. Etym: [Cf. F. télescopique.]

1. Of or pertaining to a telescope; performed by a telescope.

2. Seen or discoverable only by a telescope; as, telescopic stars.

3. Able to discern objects at a distance; farseeing; far-reaching; as, a telescopic eye; telescopic vision.

4. Having the power of extension by joints sliding one within another, like the tube of a small telescope or a spyglass; especially (Mach.), constructed of concentric tubes, either stationary, as in the telescopic boiler, or movable, as in the telescopic chimney of a war vessel, which may be put out of sight by being lowered endwise.

TELESCOPICALLY
Tel‘e*scop"ic*al*ly, adv.

Defn: In a telescopical manner; by or with the telescope.

TELESCOPIC SIGHT
Tel‘e*scop"ic sight‘.

Defn: A sight consisting of a small telescope, as on a compass or rifle.

TELESCOPIST
Te*les"co*pist, n.

Defn: One who uses a telescope. R. A. Proctor.

TELESCOPY
Te*les"co*py, n.

Defn: The art or practice of using or making telescopes.

TELESEISM
Tel"e*seism, n. [Gr. th e far +  shock.]

Defn: A seismic movement or shock far from the recording instrument.
-- Tel‘e*seis"mic (#), a.

TELESEME
Tel"e*seme, n. [Gr. th e far + sign.]

Defn: A system of apparatus for electric signals providing for automatic transmission of a definite number of different signals or calls, as in connection with hotel annunciators.

TELESM
Tel"esm, n. Etym: [Ar. tilism. See Talisman.]

Defn: A kind of amulet or magical charm. [Obs.] J. Gregory.

TELESMATIC; TELESMATICAL
Tel‘es*mat"ic, Tel‘es*mat"ic*al, a.

Defn: Of or pertaining to telesms; magical. J. Gregory.

TELESPECTROSCOPE
Tel‘e*spec"tro*scope, n. Etym: [Gr. spectroscope.] (Astron.)

Defn: A spectroscope arranged to be attached to a telescope for observation of distant objects, as the sun or stars. Lockyer.

TELESTEREOGRAPH
Tel‘e*ste"re*o*graph‘, n. [Gr. th e far + stereograph.]

Defn: An instrument for telegraphically reproducing a photograph. --
Tel‘e*ste‘re*og"ra*phy (#), n.

TELESTEREOSCOPE
Tel‘e*ste"re*o*scope, n. Etym: [Gr. stereoscope.] (Opt.)

Defn: A stereoscope adapted to view distant natural objects or landscapes; a telescopic stereoscope.

TELESTIC
Te*les"tic, a. Etym: [Gr.

Defn: Tending or relating to a purpose or an end. [R.] Cudworth.

TELESTICH
Te*les"tich, n. Etym: [Gr.

Defn: A poem in which the final letters of the lines, taken consequently, make a name. Cf. Acrostic.

TELETHERMOGRAPH
Tel‘e*ther"mo*graph, n. [Gr. th e far + thermo- + -graph.] (Physics)
(a) A record of fluctuations of temperature made automatically at a distant station.
(b) An instrument, usually electrical, making such records.

TELETHERMOMETER
Tel‘e*ther*mom"e*ter, n. Etym: [Gr. thermometer.] (Physics)

Defn: An apparatus for determining the temperature of a distant point, as by a thermoelectric circuit or otherwise.

TELEUTOSPORE
Te*leu"to*spore, n. Etym: [Gr. spore.] (Bot.)

Defn: The thick-celled winter or resting spore of the rusts (order Uredinales), produced in late summer. See Illust. of Uredospore.

TELFORD
Tel"ford, a. [After Thomas Telford, a Scotch road engineer.]

Defn: Designating, or pert. to, a road pavement having a surface of small stone rolled hard and smooth, distinguished from macadam road by its firm foundation of large stones with fragments of stone wedged tightly, in the interstices; as, telford pavement, road, etc.

TELFORDIZE
Tel"ford*ize, v. t. [imp. & p. p. Telfordized; p. pr. & vb. n. Telfordizing.]

Defn: To furnish (a road) with a telford pavement.

TELHARMONIC
Tel‘har*mon"ic, a.

Defn: Of or pertaining to telharmonium.

TELHARMONIUM; TELHARMONY
Tel‘har*mo"ni*um, n. [Gr. th e far + harmolium.]

Defn: An instrument for producing music (Tel*har"mo*ny []), at a distant point or points by means of alternating currents of electricity controlled by an operator who plays on a keyboard. The music is produced by a receiving instrument similar or analogous to the telephone, but not held to the ear. The pitch corresponds with frequency of alternation of current.

TELIC
Tel"ic, a. Etym: [Gr. (Gram.)

Defn: Denoting the final end or purpose, as distinguished from ecbatic. See Ecbatic. Gibbs.

TELL
Tell, v. t. [imp. & p. p. Told; p. pr. & vb. n. Telling.] Etym: [AS. tellan, from talu tale, number, speech; akin to D. tellen to count, G. zählen, OHG. zellen to count, tell, say, Icel. telja, Dan. tale to speak, tælle to count. See Tale that which is told.]

1. To mention one by one, or piece by piece; to recount; to enumerate; to reckon; to number; to count; as, to tell money. "An heap of coin he told." Spenser.
He telleth the number of the stars. Ps. cxlvii. 4.
Tell the joints of the body. Jer. Taylor.

2. To utter or recite in detail; to give an account of; to narrate.
Of which I shall tell all the array. Chaucer.
And not a man appears to tell their fate. Pope.

3. To make known; to publish; to disclose; to divulge.
Why didst thou not tell me that she was thy wife Gen. xii. 18.

4. To give instruction to; to make report to; to acquaint; to teach; to inform.
A secret pilgrimage, That you to-day promised to tell me of Shak.

5. To order; to request; to command.

He told her not to be frightened. Dickens.

6. To discern so as to report; to ascertain by observing; to find out; to discover; as, I can not tell where one color ends and the other begins.

7. To make account of; to regard; to reckon; to value; to estimate. [Obs.]
I ne told no dainity of her love. Chaucer.

Note: Tell, though equivalent in some respect to speak and say, has not always the same application. We say, to tell truth or falsehood, to tell a number, to tell the reasons, to tell something or nothing; but we never say, to tell a speech, discourse, or oration, or to tell an argument or a lesson. It is much used in commands; as, tell me the whole story; tell me all you know. To tell off, to count; to divide. Sir W. Scott.

Syn.
-- To communicate; impart; reveal; disclose; inform; acquaint; report; repeat; rehearse; recite.

TELL
Tell, v. i.

1. To give an account; to make report.
That I may publish with the voice of thankgiving, and tell of all thy wondrous works. Ps. xxvi. 7.

2. To take effect; to produce a marked effect; as, every shot tells; every expression tells. To tell of. (a) To speak of; to mention; to narrate or describe. (b) To inform against; to disclose some fault of.
-- To tell on, to inform against. [Archaic & Colloq.]
Lest they should tell on us, saying, So did David. 1 Sam. xxvii. 11.

TELL
Tell, n.

Defn: That which is told; tale; account. [R.]
I am at the end of my tell. Walpole.

TELL
Tell, n. Etym: [Ar.]

Defn: A hill or mound. W. M. Thomson.

TELLABLE
Tell"a*ble, a.

Defn: Capable of being told.

TELLEN
Tel"len, n. (Zoöl.)

Defn: Any species of Tellina.

TELLER
Tell"er, n.

1. One who tells, relates, or communicates; an informer, narrator, or describer.

2. One of four officers of the English Exchequer, formerly appointed to receive moneys due to the king and to pay moneys payable by the king. Cowell.

3. An officer of a bank who receives and counts over money paid in, and pays money out on checks.

4. One who is appointed to count the votes given in a legislative body, public meeting, assembly, etc.

TELLERSHIP
Tell"er*ship, n.

Defn: The office or employment of a teller.

TELLINA
Tel*li"na, n. Etym: [NL., fr. Gr. (Zoöl.)

Defn: A genus of marine bivalve mollusks having thin, delicate, and often handsomely colored shells.

TELLING
Tell"ing, a.

Defn: Operating with great effect; effective; as, a telling speech. -- Tell"ing*ly, adv.

TELLTALE
Tell"tale‘, a.

Defn: Telling tales; babbling. "The telltale heart." Poe.

TELLTALE
Tell"tale‘, n.

1. One who officiously communicates information of the private concerns of others; one who tells that which prudence should suppress.

2. (Mus.)

Defn: A movable piece of ivory, lead, or other material, connected with the bellows of an organ, that gives notice, by its position, when the wind is exhausted.

3. (Naut.)
(a) A mechanical attachment to the steering wheel, which, in the absence of a tiller, shows the position of the helm.
(b) A compass in the cabin of a vessel, usually placed where the captain can see it at all hours, and thus inform himself of the vessel’s course.

4. (Mach.)

Defn: A machine or contrivance for indicating or recording something, particularly for keeping a check upon employees, as factory hands, watchmen, drivers, check takers, and the like, by revealing to their employers what they have done or omitted.

5. (Zoöl.)

Defn: The tattler. See Tattler.

TELLURAL
Tel*lu"ral, a. Etym: [L. tellus, -uris, the earth.]

Defn: Of or pertaining to the earth. [R.]

TELLURATE
Tel"lu*rate, n. Etym: [Cf. F. tellurate. See Tellurium.] (Chem.)

Defn: A salt of telluric acid.

TELLURET
Tel"lu*ret, n. (Chem.)

Defn: A telluride. [Obsoles.]

TELLURETED
Tel"lu*ret‘ed, n. (Chem.)

Defn: Combined or impregnated with tellurium; tellurized. [Written also telluretted.] [Obsoles.] Tellureted hydrogen (Chem.), hydrogen telluride, $H_2Te$, a gaseous substance analogous to hydrogen sulphide; -- called also tellurhydric acid.

TELLURHYDRIC
Tel‘lur*hy"dric, a. (Chem.)

Defn: Of, pertaining to, or designating, hydrogen telluride, which is regarded as an acid, especially when in solution.

TELLURIAN
Tel*lu"ri*an, a. Etym: [L. tellus, -uris, the earth.]

Defn: Of or pertaining to the earth. De Quincey.

TELLURIAN
Tel*lu"ri*an, n.

1. A dweller on the earth. De Quincey.

2. An instrument for showing the operation of the causes which produce the succession of day and night, and the changes of the seasons. [Written also tellurion.]

TELLURIC
Tel*lu"ric, a. Etym: [L. tellus, -uris, the earth: cf. F. tellurique.]

1. Of or pertaining to the earth; proceeding from the earth.
Amid these hot, telluric flames. Carlyle.

2. (Chem.)

Defn: Of or pertaining to tellurium; derived from, or resembling, tellurium; specifically, designating those compounds in which the element has a higher valence as contrasted with tellurous compounds; as, telluric acid, which is analogous to sulphuric acid. Telluric bismuth (Min.), tetradymite.
-- Telluric silver (Min.), hessite.

TELLURIDE
Tel"lu*ride, n. (Chem.)

Defn: A compound of tellurium with a more positive element or radical; -- formerly called telluret.

TELLURISM
Tel"lu*rism, n.

Defn: An hypothesis of animal magnetism propounded by Dr. Keiser, in Germany, in which the phenomena are ascribed to the agency of a telluric spirit or influence. [R.] S. Thompson.

TELLURITE
Tel"lu*rite, n.

1. (Chem.)

Defn: A salt of tellurous acid.

2. (Min.)

Defn: Oxide of tellurium. It occurs sparingly in tufts of white or yellowish crystals.

TELLURIUM
Tel*lu"ri*um, n. Etym: [NL., from L. tellus, -uris, the earth.] (Chem.)

Defn: A rare nonmetallic element, analogous to sulphur and selenium, occasionally found native as a substance of a silver-white metallic luster, but usually combined with metals, as with gold and silver in the mineral sylvanite, with mercury in Coloradoite, etc. Symbol Te. Atomic weight 125.2. Graphic tellurium. (Min.) See Sylvanite. -- Tellurium glance (Min.), nagyagite; -- called also black tellurium.

TELLURIZE
Tel"lu*rize, v. t. (Chem.)

Defn: To impregnate with, or to subject to the action of, tellurium; -- chiefly used adjectively in the past participle; as, tellurized ores.

TELLUROUS
Tel"lu*rous, a. (Chem.)

TEMERITY
Te*mer"i*ty, n. Etym: [L. temeritas, from temere by chance, rashly; perhaps akin to Skr. tamas darkness: cf. F. témérité.]

Defn: Unreasonable contempt of danger; extreme venturesomeness; rashness; as, the temerity of a commander in war.

Syn.
-- Rashness; precipitancy; heedlessness; venturesomeness.
-- Temerity, Rashness. These words are closely allied in sense, but have a slight difference in their use and application. Temerity is Latin, and rashness is Anglo-Saxon. As in many such cases, the Latin term is more select and dignified; the Anglo-Saxon more familiar and energetic. We show temerity in hasty decisions, and the conduct to which they lead. We show rashness in particular actions, as dictated by sudden impulse. It is an exhibition of temerity to approach the verge of a precipice; it is an act of rashness to jump into a river without being able to swim. Temerity, then, is an unreasonable contempt of danger; rashness is a rushing into danger from thoughtlessness or excited feeling.
It is notorious temerity to pass sentence upon grounds uncapable of evidence. Barrow.
Her rush hand in evil hour Forth reaching to the fruit, she plucked, she eat. Milton.

TEMEROUS

TEMPLAR
Tem"plar, n. Etym: [OE. templere, F. templier, LL. templarius. See Temple a church.]

1. One of a religious and military order first established at Jerusalem, in the early part of the 12th century, for the protection of pilgrims and of the Holy Sepulcher. These Knights Templars, or Knights of the Temple, were so named because they occupied an apartment of the palace of Bladwin II. in Jerusalem, near the Temple.

Note: The order was first limited in numbers, and its members were bound by vows of chastity and poverty. After the conquest of Palestine by the Saracens, the Templars spread over Europe, and, by reason of their reputation for valor and piety, they were enriched by numerous donations of money and lands. The extravagances and vices of the later Templars, however, finally led to the suppression of the order by the Council of Vienne in 1312.

2. A student of law, so called from having apartments in the Temple

at London, the original buildings having belonged to the Knights Templars. See Inner Temple, and Middle Temple, under Temple. [Eng.]

TERM
Term, n. Etym: [F. terme, L. termen, -inis, terminus, a boundary limit, end; akin to Gr. Thrum a tuft, and cf. Terminus, Determine, Exterminate.]

1. That which limits the extent of anything; limit; extremity; bound; boundary.
Corruption is a reciprocal to generation, and they two are as nature's two terms, or boundaries. Bacon.

2. The time for which anything lasts; any limited time; as, a term of five years; the term of life.

3. In universities, schools, etc., a definite continuous period during which instruction is regularly given to students; as, the school year is divided into three terms.

4. (Geom.)

Defn: A point, line, or superficies, that limits; as, a line is the term of a superficies, and a superficies is the term of a solid.

5. (Law)

Defn: A fixed period of time; a prescribed duration; as:
(a) The limitation of an estate; or rather, the whole time for which an estate is granted, as for the term of a life or lives, or for a term of years.
(b) A space of time granted to a debtor for discharging his obligation.
(c) The time in which a court is held or is open for the trial of causes. Bouvier.

Note: In England, there were formerly four terms in the year, during which the superior courts were open: Hilary term, beginning on the 11th and ending on the 31st of January; Easter term, beginning on the 15th of April, and ending on the 8th of May; Trinity term, beginning on the 22d day of May, and ending on the 12th of June; Michaelmas term, beginning on the 2d and ending on the 25th day of November. The rest of the year was called vacation. But this division has been practically abolished by the Judicature Acts of 1873, 1875, which provide for the more convenient arrangement of the terms and vacations. In the United States, the terms to be observed by the tribunals of justice are prescribed by the statutes of Congress and of the several States.

6. (Logic)

Defn: The subject or the predicate of a proposition; one of the three component parts of a syllogism, each one of which is used twice.
The subject and predicate of a proposition are, after Aristotle, together called its terms or extremes. Sir W. Hamilton.

Note: The predicate of the conclusion is called the major term, because it is the most general, and the subject of the conclusion is called the minor term, because it is less general. These are called the extremes; and the third term, introduced as a common measure between them, is called the mean or middle term. Thus in the following syllogism, --Every vegetable is combustible; Every tree is a vegetable; Therefore every tree is combustible, -combustible, the predicate of the conclusion, is the major term; tree is the minor term; vegetable is the middle term.

7. A word or expression; specifically, one that has a precisely limited meaning in certain relations and uses, or is peculiar to a science, art, profession, or the like; as, a technical term. "Terms quaint of law." Chaucer.
In painting, the greatest beauties can not always be expressed for want of terms. Dryden.

Note: Terms legal and conventional in Scotland correspond to quarter days in England and Ireland. There are two legal terms -- Whitsunday, May 15, and Martinmas, Nov. 11; and two conventional terms -- Candlemas, Feb. 2, and Lammas day, Aug. 1. Mozley & W.

13. (Naut.)

Defn: A piece of carved work placed under each end of the taffrail. J. Knowels. In term, in set terms; in formal phrase. [Obs.]
I can not speak in term. Chaucer.
-- Term fee (Law) (a), a fee by the term, chargeable to a suitor, or by law fixed and taxable in the costs of a cause for each or any term it is in court.
-- Terms of a proportion (Math.), the four members of which it is composed.
-- To bring to terms, to compel (one) to agree, assent, or submit; to force (one) to come to terms.
-- To make terms, to come to terms; to make an agreement: to agree.

Syn.
-- Limit; bound; boundary; condition; stipulation; word; expression.
-- Term, Word. These are more frequently interchanged than almost any other vocables that occur of the language. There is, however, a difference between them which is worthy of being kept in mind. Word is generic; it denotes an utterance which represents or expresses our thoughts and feelings. Term originally denoted one of the two essential members of a proposition in logic, and hence signifies a word of specific meaning, and applicable to a definite class of objects. Thus, we may speak of a scientific or a technical term, and of stating things in distinct terms. Thus we say, "the term minister literally denotes servant;" "an exact definition of terms is essential to clearness of thought;" "no term of reproach can sufficiently express my indignation;" "every art has its peculiar and distinctive terms," etc. So also we say, "purity of style depends on the choice of words, and precision of style on a clear understanding of the terms used." Term is chiefly applied to verbs, nouns, and adjectives, these being capable of standing as terms in a logical proposition; while prepositions and conjunctions, which can never be so employed, are rarely spoken of as terms, but simply as words.

Defn: The waters under the territorial jurisdiction of a state; specif., the belt (often called the marine belt or territorial sea) of sea subject to such jurisdiction, and subject only to the right of innocent passage by the vessels of other states.

Perhaps it may be said without impropriety that a state has theoretically the right to extend its territorial waters from time to time at its will with the increased range of guns. Whether it would in practice be judicious to do so . . . is a widely different matter . . . . In any case the custom of regulating a line three miles from land as defining the boundary of marginal territorial waters is so far fixed that a state must be supposed to accept it in absence of express notice.
W. E. Hall.

Syn.
-- Proof; evidence; attestation; witness; affirmation; confirmation; averment.
-- Testimony, Proof, Evidence. Proof is the most familiar, and is used more frequently (though not exclusively) of facts and things which occur in the ordinary concerns of life. Evidence is a word of more dignity, and is more generally applied to that which is moral or intellectual; as, the evidences of Christianity, etc. Testimony is what is deposed to by a witness on oath or affirmation. When used figuratively or in a wider sense, the word testimony has still a reference to some living agent as its author, as when we speak of the testimony of conscience, or of doing a thing in testimony of our affection, etc. Testimony refers rather to the thing declared, evidence to its value or effect. "To conform our language more to common use, we ought to divide arguments into demonstrations, proofs, and probabilities; ba proofs, meaning such arguments from experience as leave no room for doubt or opposition." Hume. "The evidence of sense is the first and highest kind of evidence of which human nature is capable." Bp. Wilkins. "The proof of everything must be by the testimony of such as the parties produce." Spenser.

THALLOPHYTA
Thal*loph"y*ta, n. pl. [NL. See Thallophyte.] (Bot.)

Defn: A phylum of plants of very diverse habit and structure, including the algæ, fungi, and lichens. The simpler forms, as many blue-green algæ, yeasts, etc., are unicellular and reproduce vegetatively or  by means of asexual spores; in the higher forms the plant body is a thallus, which may be filamentous or may consist of plates of cells; it is commonly undifferentiated into stem, leaves, and roots, and shows no distinct tissue systems; the fronds of many algæ, however, are modified to serve many of the functions of the above-named organs. Both asexual and sexual reproduction, often of a complex type, occur in these forms. The Thallophyta exist almost exclusively as gametophytes, the sporophyte being absent or rudimentary. By those who do not separate the Myxophyta from the Tallophyta as a distinct phylum the latter is treated as the lowermost group in the vegetable kingdom.

THAT
That, pron., a., conj., & adv. Etym: [AS. th\’91t, neuter nom. & acc. sing. of the article (originally a demonstrative pronoun). The nom. masc. se, and the nom. fem. seó are from a different root. AS. th\’91t is akin to D. dat, G. das, OHG. daz, Sw. & Dan. det, Icel. Þat (masc. sa, fem. so), Goth. Þata (masc. sa, fem. so), Gr. tat (for tad, masc. sas, fem. sa); cf. L. istud that. *184. Cf. The, Their, They, Them, This, Than, Since.]

1. As a demonstrative pronoun (pl. Those), that usually points out, or refers to, a person or thing previously mentioned, or supposed to be understood. That, as a demonstrative, may precede the noun to which it refers; as, that which he has said is true; those in the basket are good apples.
The early fame of Gratian was equal to that of the most celebrated princes. Gibbon.

Note: That may refer to an entire sentence or paragraph, and not merely to a word. It usually follows, but sometimes precedes, the sentence referred to.
That be far from thee, to do after this manner, to slay the righteous with the wicked. Gen. xviii. 25.
And when Moses heard that, he was content. Lev. x. 20.
I will know your business, Harry, that I will. Shak.

Note: That is often used in opposition to this, or by way of distinction, and in such cases this, like the Latin hic and French ceci, generally refers to that which is nearer, and that, like Latin ille and French cela, to that which is more remote. When they refer to foreign words or phrases, this generally refers to the latter, and that to the former.
Two principles in human nature reign; Self-love, to urge, and Reason, to restrain; Nor this a good, nor that a bad we call. Pope.

If the Lord will, we shall live, and do this or that. James iv. 16.

2. As an adjective, that has the same demonstrative force as the pronoun, but is followed by a noun.
It shall be more tolerable for Sodom and Gomorrah in the day of judgment, than for that city. Matt. x. 15.
The woman was made whole from that hour. Matt. ix. 22.

Note: That was formerly sometimes used with the force of the article the, especially in the phrases that one, that other, which were subsequently corrupted into th'tone, th'tother (now written t'other).
Upon a day out riden knightes two . . . That one of them came home, that other not. Chaucer.

3. As a relative pronoun, that is equivalent to who or which, serving to point out, and make definite, a person or thing spoken of, or alluded to, before, and may be either singular or plural.
He that reproveth a scorner getteth to himself shame. Prov. ix. 7.
A judgment that is equal and impartial must incline to the greater probabilities. Bp. Wilkins.

Note: If the relative clause simply conveys an additional idea, and is not properly explanatory or restrictive, who or which (rarely that) is employed; as, the king that (or who) rules well is generally popular; Victoria, who (not that) rules well, enjoys the confidence of her subjects. Ambiguity may in some cases be avoided in the use of that (which is restrictive) instead of who or which, likely to be understood in a coördinating sense. Bain. That was formerly used for that which, as what is now; but such use is now archaic.
We speak that we do know, and testify that we have seen. John iii. 11.
That I have done it is thyself to wite [blame]. Chaucer.
That, as a relative pronoun, cannot be governed by a preposition preceding it, but may be governed by one at the end of the sentence which it commences.
The ship that somebody was sailing in. Sir W. Scott.
In Old English, that was often used with the demonstratives he, his, him, etc., and the two together had the force of a relative pronoun; thus, that he = who; that his = whose; that him = whom.
I saw to-day a corpse yborn to church That now on Monday last I saw him wirche [work]. Chaucer.
Formerly, that was used, where we now commonly use which, as a relative pronoun with the demonstrative pronoun that as its antecedent.
That that dieth, let it die; and that that is to cut off, let it be cut off. Zech. xi. 9.

4. As a conjunction, that retains much of its force as a demonstrative pronoun. It is used, specifically: --
(a) To introduce a clause employed as the object of the preceding verb, or as the subject or predicate nominative of a verb.
She tells them 't is a causeless fantasy, And childish error, that they are afraid. Shak.
I have shewed before, that a mere possibility to the contrary, can by no means hinder a thing from being highly credible. Bp. Wilkins.

(b) To introduce, a reason or cause; -- equivalent to for that, in that, for the reason that, because.
He does hear me; And that he does, I weep. Shak.

(c) To introduce a purpose; -- usually followed by may, or might, and frequently preceded by so, in order, to the end, etc.
These things I say, that ye might be saved. John v. 34.

To the end that he may prolong his days. Deut. xvii. 20.

(d) To introduce a consequence, result, or effect; -- usually preceded by so or such, sometimes by that.
The birds their notes renew, and bleating herds Attest their joy, that hill and valley rings. Milton.
He gazed so long That both his eyes were dazzled. Tennyson.
(e) To introduce a clause denoting time; -- equivalent to in which time, at which time, when.
So wept Duessa until eventide, That shining lamps in Jove’s high course were lit. Spenser.
Is not this the day That Hermia should give answer of her choice Shak.

(f) In an elliptical sentence to introduce a dependent sentence expressing a wish, or a cause of surprise, indignation, or the like.
Ha, cousin Silence, that thou hadst seen that that this knight and I have seen! Shak.
O God, that right should thus overcome might! Shak.

Note: That was formerly added to other conjunctions or to adverbs to make them emphatic.
To try if that our own be ours or no. Shak.
That is sometimes used to connect a clause with a preceding conjunction on which it depends.
When he had carried Rome and that we looked For no less spoil than glory. Shak.

5. As adverb: To such a degree; so; as, he was that frightened he could say nothing. [Archaic or in illiteral use.] All that, everything of that kind; all that sort.
With singing, laughing, ogling, and all that. Pope.
The rank is but the guinea’s stamp, The man’s the gowd [gold] for a’that. Burns.
-- For that. See under For, prep.
-- In that. See under In, prep.

The"o*rist, n. Etym: [Cf. F. théoriste.]

Defn: One who forms theories; one given to theory and speculation; a speculatist. Cowper.
The greatest theoretists have given the preference to such a government as that which obtains in this kingdom. Addison.

THEORIZATION
The‘o*ri*za"tion, n.

Defn: The act or product of theorizing; the formation of a theory or theories; speculation.

THEORIZE
The"o*rize, v. i. [imp. & p. p. Theorized; p. pr. & vb. n. Theorizing.] Etym: [Cf. F. théoriser.]

Defn: To form a theory or theories; to form opinions solely by theory; to speculate.

THEORIZER
The"o*ri‘zer, n.

Defn: One who theorizes or speculates; a theorist.

THEORY
The"o*ry, n.; pl. Theories. Etym: [F. théorie, L. theoria, Gr. Theater.]

1. A doctrine, or scheme of things, which terminates in speculation or contemplation, without a view to practice; hypothesis; speculation.

Note: "This word is employed by English writers in a very loose and improper sense. It is with them usually convertible into hypothesis, and hypothesis is commonly used as another term for conjecture. The terms theory and theoretical are properly used in opposition to the terms practice and practical. In this sense, they were exclusively employed by the ancients; and in this sense, they are almost exclusively employed by the Continental philosophers." Sir W. Hamilton.

2. An exposition of the general or abstract principles of any science; as, the theory of music.

3. The science, as distinguished from the art; as, the theory and practice of medicine.

4. The philosophical explanation of phenomena, either physical or moral; as, Lavoisier’s theory of combustion; Adam Smith’s theory of moral sentiments. Atomic theory, Binary theory, etc. See under Atomic, Binary, etc.

Syn.
 -- Hypothesis, speculation.
 -- Theory, Hypothesis. A theory is a scheme of the relations subsisting between the parts of a systematic whole; an hypothesis is a tentative conjecture respecting a cause of phenomena.

THEOSOPH; THEOSOPHER
The"o*soph, The*os"o*pher, n.

Defn: A theosophist.

THEOSOPHIC; THEOSOPHICAL
The‘o*soph"ic, The‘o*soph"ic*al, a. Etym: [Cf. F. théosophique.]

Defn: Of or pertaining to theosophy.
 -- The‘o*soph"ic*al*ly, adv.

THEOSOPHISM
The*os"o*phism, n. Etym: [Cf. F. théosophisme.]

Defn: Belief in theosophy. Murdock.

THEOSOPHIST
The*os"o*phist, n.

Defn: One addicted to theosophy.
The theosophist is one who gives you a theory of God, or of the works of God, which has not reason, but an inspiration of his own, for its basis. R. A. Vaughan.

THEOSOPHISTICAL
The*os‘o*phis"tic*al, a.

Defn: Of or pertaining to theosophy; theosophical.

THEOSOPHIZE
The*os"o*phize, v. i. [imp. & p. p. Theosophized; p. pr. & vb. n. Theosophizing.]

Defn: To practice theosophy. [R.]

THEOSOPHY
The*os"o*phy, n. Etym: [Gr. théosophie.]

Defn: Any system of philosophy or mysticism which proposes to attain intercourse with God and superior spirits, and consequent superhuman knowledge, by physical processes, as by the theurgic operations of some ancient Platonists, or by the chemical processes of the German fire philosophers; also, a direct, as distinguished from a revealed, knowledge of God, supposed to be attained by extraordinary illumination; especially, a direct insight into the processes of the divine mind, and the interior relations of the divine nature.

THERAPEUTAE
Ther'a*peu"tæ, n. pl. Etym: [NL., fr. Gr. Therapeutic.] (Eccl. Hist.)

Defn: A name given to certain ascetics said to have anciently dwelt in the neighborhood of Alexandria. They are described in a work attributed to Philo, the genuineness and credibility of which are now much discredited.

THERAPEUTIC; THERAPEUTICAL
Ther'a*peu"tic, Ther'a*peu"tic*al, a. Etym: [F. thérapeutique, Gr. (Med.)

Defn: Of or pertaining to the healing art; concerned in discovering and applying remedies for diseases; curative. "Therapeutic or curative physic." Sir T. Browne.
Medicine is justly distributed into "prophylactic," or the art of preserving health, and therapeutic, or the art of restoring it. I. Watts.

THERAPEUTIC
Ther'a*peu"tic, n.

Defn: One of the Therapeutæ.

THERAPEUTICS
Ther'a*peu"tics, n. Etym: [Cf. F. thérapeutique.]

Defn: That part of medical science which treats of the discovery and application of remedies for diseases.

THERAPEUTIST
Ther'a*peu"tist, n.

Defn: One versed in therapeutics, or the discovery and application of remedies.

THERAPY
Ther"a*py, n. Etym: [Gr.

Defn: Therapeutics.

THERE
There, adv. Etym: [OE. ther, AS. th\'d6r; akin to D. daar, G. da, OHG. dar, Sw. & Dan. der, Icel. & Goth. Þar, Skr. tarhi then, and E. that. *184. See That, pron.]

1. In or at that place. "[They] there left me and my man, both bound together." Shak.
The Lord God planted a garden eastward in Eden; and there he put the

man whom he had formed. Ge. ii. 8.

Note: In distinction from here, there usually signifies a place farther off. "Darkness there might well seem twilight here." Milton.

2. In that matter, relation, etc.; at that point, stage, etc., regarded as a distinct place; as, he did not stop there, but continued his speech.
The law that theaten'd death becomes thy friend And turns it to exile; there art thou happy. Shak.

3. To or into that place; thither.
The rarest that e'er came there. Shak.

Note: There is sometimes used by way of exclamation, calling the attention to something, especially to something distant; as, there, there! see there! look there! There is often used as an expletive, and in this use, when it introduces a sentence or clause, the verb precedes its subject.
A knight there was, and that a worthy man. Chaucer.
There is a path which no fowl knoweth. Job xxviii. 7.
Wherever there is a sense or perception, there some idea is actually produced. Locke.
There have been that have delivered themselves from their ills by their good fortune or virtue. Suckling.

Note: There is much used in composition, and often has the sense of a pronoun. See Thereabout, Thereafter, Therefrom, etc.

Note: There was formerly used in the sense of where.
Spend their good there it is reasonable. Chaucer.
Here and there, in one place and another.

Syn.
 -- See Thither.

THEREABOUT; THEREABOUTS
There"a*bout', There"a*bouts', adv. Etym: [The latter spelling is less proper, but more commonly used.]

1. Near that place.

2. Near that number, degree, or quantity; nearly; as, ten men, or thereabouts.
Five or six thousand horse . . . or thereabouts. Shak.
Some three months since, or thereabout. Suckling.

3. Concerning that; about that. [R.]
What will ye dine I will go thereabout. Chaucer.
They were much perplexed thereabout. Luke xxiv. 4.

THEREAFTER
There*af"ter, adv. Etym: [AS. th\'d6ræfter after that. See There, and After.]

1. After that; afterward.

2. According to that; accordingly.
I deny not but that it is of greatest concernment in the church and commonwealth to have a vigilant eye how books demean themselves as well as men; and thereafter to confine, imprison, and do sharpest justice on them as malefactors. Milton.

3. Of that sort. [Obs.] "My audience is not thereafter." Latimer.

THEREAGAIN
There"a*gain‘, adv.

Defn: In opposition; against one’s course. [Obs.]
If that him list to stand thereagain. Chaucer.

THERE-ANENT
There"-a*nent‘, adv.

Defn: Concerning that. [Scot.]

THEREAT
There*at", adv.

1. At that place; there.
Wide is the gate, and broad is the way, that leadeth to destruction, and many there be which go in thereat. Matt. vii. 13.

2. At that occurrence or event; on that account.
Every error is a stain to the beauty of nature; for which cause it blusheth thereat. Hooker.

THEREBEFORE; THEREBIFORN
There‘be*fore", There‘bi*forn", adv.

Defn: Before that time; beforehand. [Obs.]
Many a winter therebiforn. Chaucer.

THEREBY
There*by", adv.

1. By that; by that means; in consequence of that.
Acquaint now thyself with him, and be at peace; thereby good shall come unto thee. Job xxii. 21.

2. Annexed to that. "Thereby hangs a tale." Shak.

3. Thereabout; -- said of place, number, etc. Chaucer.

THEREFOR
There*for", adv. Etym: [There + for. Cf. Therefore.]

Defn: For that, or this; for it.
With certain officers ordained therefore. Chaucer.

THEREFORE
There"fore, conj. & adv. Etym: [OE. therfore. See There, and Fore, adv., For, and cf. Therefor.]

1. For that or this reason, referring to something previously stated; for that.
I have married a wife, and therefore I can not come. Luke xiv. 20.
Behold, we have forsaken all, and followed thee; what shall we have therefore Matt. xix. 27.

2. Consequently; by consequence.
He blushes; therefore he is guilty. Spectator.

Syn.
-- See Then.

THEREFROM
There*from", adv.

Defn: From this or that.
Turn not aside therefrom to the right hand or to the left. John.
xxiii. 6.

THEREIN
There*in", adv.

Defn: In that or this place, time, or thing; in that particular or
respect. Wyclif.
He pricketh through a fair forest, Therein is many a wild beast.
Chaucer.
Bring forth abundantly in the earth, and multiply therein. Gen. ix.
7.
Therein our letters do not well agree. Shak.

THEREINTO
There'in*to", adv.

Defn: Into that or this, or into that place. Bacon.
Let not them . . . enter thereinto. Luke xxi. 21.

THEREOF
There*of", adv.

Defn: Of that or this.
In the day that thou eatest thereof, thou shalt surely die. Gen. ii.
17.

THEREOLOGY
The're*ol"o*gy, n.

Defn: Therapeutios.

THEREON
There*on", adv. Etym: [AS. . See There, and On.]

Defn: On that or this. Chaucer.
Then the king said, Hang him thereon. Esther vii. 9.

THEREOUT
There*out", adv.

1. Out of that or this.
He shall take thereout his handful of the flour. Lev. ii. 2.

2. On the outside; out of doors. [Obs.] Chaucer.

THERETO
There*to", adv.

1. To that or this. Chaucer.

2. Besides; moreover. [Obs.] Spenser.
Her mouth full small, and thereto soft and red. Chaucer.

THERETOFORE
There'to*fore", adv.

Defn: Up to that time; before then; -- correlative with heretofore.

THEREUNDER
There*un"der, adv.

Defn: Under that or this.

THEREUNTO
There'un*to", adv.

Defn: Unto that or this; thereto; besides. Shak.

THEREUPON
There'up*on", adv.

1. Upon that or this; thereon. "They shall feed thereupon." Zeph. ii. 7.

2. On account, or in consequence, of that; therefore.
[He] hopes to find you forward, . . . And thereupon he sends you this good news. Shak.

3. Immediately; at once; without delay.

THEREWHILE
There*while", adv.

Defn: At that time; at the same time. [Obs.] Laud.

THEREWITH
There*with", adv.

1. With that or this. "I have learned in whatsoever state I am, therewith to be content." Phil. iv. 11.

2. In addition; besides; moreover.
To speak of strength and therewith hardiness. Chaucer.

3. At the same time; forthwith. [Obs.] Johnson.

THEREWITHAL
There'with*al", adv.

1. Over and above; besides; moreover. [Obs.] Daniel.
And therewithal it was full poor and bad. Chaucer.

2. With that or this; therewith; at the same time.
Thy slanders I forgive; and therewithal Remit thy other forfeits. Shak.
And therewithal one came and seized on her, And Enid started waking. Tennyson.

THERF
Therf, a. Etym: [AS. ; akin to OHG. derb, Icel. .]

Defn: Not fermented; unleavened; -- said of bread, loaves, etc. [Obs.]
Pask and the feast of therf loaves. Wyclif.

THERIAC; THERIACA
The"ri*ac, The*ri"a*ca, n. Etym: [L. theriaca an antidote against the bite of serpents, Gr. thériaque. See Treacle.]

1. (Old Med.)

Defn: An ancient composition esteemed efficacious against the effects of poison; especially, a certain compound of sixty-four drugs, prepared, pulverized, and reduced by means of honey to an electuary; -- called also theriaca Andromachi, and Venice treacle.

2. Treacle; molasses. British Pharm.

THERIAC; THERIACAL
The"ri*ac, The*ri"a*cal, a. Etym: [Cf. F. thériacal.]

Defn: Of or pertaining to theriac; medicinal. "Theriacal herbs." Bacon.

THERIAL
The"ri*al, a.

Defn: Theriac. [R.] Holland.

THERIODONT
The"ri*o*dont, n. (Paleon.)

Defn: One of the Theriodontia. Used also adjectively.

THERIODONTA
The‘ri*o*don"ta, n. pl. Etym: [NL.] (Paleon.)

Defn: Same as Theriodontia.

THERIODONTIA
The‘ri*o*don"ti*a, n. pl. Etym: [NL., fr. Gr. (Paleon.)

Defn: An extinct order of reptiles found in the Permian and Triassic formations in South Africa. In some respects they resembled carnivorous mammals. Called also Theromorpha.

Note: They had biconcave vertebræ, ambulatory limbs, and a well-developed pelvis and shoulder girdle. Some of the species had large maxillary teeth. The head somewhat resembled that of a turtle. The Dicynodont is one of the best-known examples. See Dicynodont.

THERIOTOMY
The‘ri*ot"o*my, n. Etym: [Gr.

Defn: Zoötomy.

THERMAE
Ther"mæ, n. pl. Etym: [L. See Thermal.]

Defn: Springs or baths of warm or hot water.

THERMAL
Ther"mal, a. Etym: [L. thermae hot springs, fr. Gr. formus warm, and E. forceps.]

Defn: Of or pertaining to heat; warm; hot; as, the thermal unit; thermal waters.
The thermal condition of the earth. J. D. Forbes.
Thermal conductivity, Thermal spectrum. See under Conductivity, and Spectrum.
-- Thermal unit (Physics), a unit chosen for the comparison or calculation of quantities of heat. The unit most commonly employed is the amount of heat necessary to raise the temperature of one gram or one pound of water from zero to one degree Centigrade. See Calorie,

and under Unit.

THERMALLY
Ther"mal*ly, adv.

Defn: In a thermal manner.

THERMANTIDOTE
Ther*man"ti*dote, n. [Gr. heat + E. antidote.]

Defn: A device for circulating and cooling the air, consisting essentially of a kind of roasting fan fitted in a window and incased in wet tatties. [India]

Will you bring me to book on the mountains, or where the
thermantidotes play
Kipling.

THERMETOGRAPH
Ther*met"o*graph, n. Etym: [Gr. -graph.]

Defn: A self-registering thermometer, especially one that registers the maximum and minimum during long periods. Nichol.

THERMIC
Ther"mic, a. Etym: [Gr.

Defn: Of or pertaining to heat; due to heat; thermal; as, thermic lines. Thermic balance. See Bolometer.
 -- Thermic fever (Med.), the condition of fever produced by sunstroke. See Sunstroke.
 -- Thermic weight. (Mech.) Same as Heat weight, under Heat.

THERMIDOR
Ther‘mi‘dor", n. Etym: [F., fr. Gr.

Defn: The eleventh month of the French republican calendar, -- commencing July 19, and ending August 17. See the Note under Vendémiaire.

THERMIFUGINE
Ther*mif"u*gine, n. Etym: [Gr. fugere to flee.] (Chem.)

Defn: An artificial alkaloid of complex composition, resembling thalline and used as an antipyretic, -- whence its name.

THERMO-
Ther"mo-.

Defn: A combining form from Gr. qe‘rmh heat, qermo‘s hot, warm; as in thermochemistry, thermodynamic.

THERMOANAESTHESIA; THERMOANESTHESIA
Ther‘mo*an‘æs*the"si*a or -an‘es*the"si*a, n. [NL.] (Med.)

Defn: Loss of power to distinguish heat or cold by touch.

THERMOBAROGRAPH
Ther‘mo*bar"o*graph, n. (Physics)

Defn: An instrument for recording simultaneously the pressure and temperature of a gas; a combined thermograph and barograph.

THERMOBAROMETER
Ther‘mo*ba*rom"e*ter, n. Etym: [Thermo- + barometer.] (Physics)

Defn: An instrument for determining altitudes by the boiling point of water.

THERMOBATTERY
Ther‘mo*bat"ter*y, n. Etym: [Thermo- + battery.]

Defn: A thermoelectric battery; a thermopile.

THERMOCAUTERY
Ther‘mo*cau"ter*y, n. Etym: [Thermo- + cautery.] (Surg.)

Defn: Cautery by the application of heat. Paquelin’s thermocautery, thermocautery by means of a hollow platinum point, which is kept constantly hot by the passage through it of benzine vapor.

THERMOCHEMIC; THERMOCHEMICAL
Ther‘mo*chem"ic, Ther‘mo*chem"ic*al, a. (Chem. Physics)

Defn: Of or pertaining to thermochemistry; obtained by, or employed in, thermochemistry.

THERMOCHEMISTRY
Ther‘mo*chem"is*try, n. Etym: [Thermo- + chemistry.]

Defn: That branch of chemical science which includes the investigation of the various relations existing between chemical action and that manifestation of force termed heat, or the determination of the heat evolved by, or employed in, chemical actions.

THERMOCHROIC
Ther‘mo*chro"ic, a.  [Thermo-+ Gr. , , color.]

Defn: Pert. to or designating heat rays that have undergone selective absorption and are therefore analogous to colored light rays.

THERMOCHROSY
Ther*moch"ro*sy, n. Etym: [Thermo- + Gr. (Physics)

Defn: The property possessed by heat of being composed, like light, of rays of different degrees of refrangibility, which are unequal in rate or degree of transmission through diathermic substances.

THERMOCOUPLE
Ther"mo*cou‘ple, n.

Defn: A thermoelectric couple.

THERMOCURRENT
Ther"mo*cur‘rent, n. Etym: [Thermo- + current.] (Physics)

Defn: A current, as of electricity, developed, or set in motion, by the action of heat.

THERMODIN
Ther"mo*din, n. [G., fr. Gr.  heat.] (Pharm.)

Defn: A white crystalline substance derived from urethane, used in medicine as an antipyretic, etc.

THERMODYNAMIC
Therʻmo*dy*nam"ic, a. Etym: [Thermo- + dynamic.] (Physics)

Defn: Relating to thermodynamics; caused or operated by force due to the application of heat. Thermodynamic function. See Heat weight, under Heat.

THERMODYNAMICS
Therʻmo*dy*nam"ics, n.

Defn: The science which treats of the mechanical action or relations of heat.

THERMOELECTRIC
Therʻmo*e*lec"tric, a. (Physics)

Defn: Pertaining to thermoelectricity; as, thermoelectric currents.

THERMOELECTRIC COUPLE; THERMOELECTRIC PAIR
Therʻmo*e*lec"tric couple or pair. (Elec.)

Defn: A union of two conductors, as bars or wires of dissimilar metals joined at their extremities, for producing a thermoelectric current.

THERMOELECTRICITY
Therʻmo*eʻlec*tric"i*ty, n. Etym: [Thermo- + electricity: cf. F. thermoélectricité.] (Physics)

Defn: Electricity developed in the action of heat. See the Note under Electricity.

THERMOELECTROMETER
Therʻmo*eʻlec*trom"e*ter, n. Etym: [Thermo- + electrometer.] (Physics)

Defn: An instrument for measuring the strength of an electric current in the heat which it produces, or for determining the heat developed by such a current.

THERMOGEN
Ther"mo*gen, n. Etym: [Thermo- + -gen.] (Old Chem.)

Defn: Caloric; heat; regarded as a material but imponderable substance.

THERMOGENIC
Therʻmo*gen"ic, a. (Physiol.)

Defn: Relating to heat, or to the production of heat; producing heat; thermogenous; as, the thermogenic tissues.

THERMOGENOUS
Ther*mog"e*nous, a. Etym: [Thermo- + -genous.] (Physiol.)

Defn: Producing heat; thermogenic.

THERMOGRAM
Ther"mo*gram, n. (Physics)

Defn: The trace or record made by means of a thermograph.

THERMOGRAPH

Ther"mo*graph, n. Etym: [Thermo- + -graph.] (Physics)

Defn: An instrument for automatically recording indications of the variation of temperature.

THERMOGRAPHY
Ther*mog"ra*phy, n. [Thermo-+ -graphy.]

Defn: Any process of writing involving the use of heat.

THERMOJUNCTION
Ther‘mo*junc"tion, n. (Elec.)

Defn: A junction of two dissimilar conductors used to produce a thermoelectric current, as in one form of pyrometer; a thermocouple.

THERMOLOGY
Ther*mol"o*gy, n. Etym: [Thermo- + -logy.]

Defn: A discourse on, or an account of, heat. Whewell.

THERMOLUMINESCENCE
Ther‘mo*lu‘mi*nes"cence, n. (Physics)

Defn: Luminescence exhibited by a substance on being moderately heated. It is shown esp. by certain substances that have been exposed to the action of light or to the cathode rays. ---lu‘mi*nes"cent (#), a.

THERMOLYSIS
Ther*mol"y*sis, n. Etym: [Thermo- + Gr. (Chem.)

Defn: The resolution of a compound into parts by heat; dissociation by heat.

THERMOLYTIC
Ther‘mo*lyt"ic, a.

Defn: Of or pertaining to thermolysis.

THERMOLYZE
Ther"mo*lyze, v. t. (Chem.)

Defn: To subject to thermolysis; to dissociate by heat.

THERMOMAGNETISM
Ther‘mo*mag"net*ism, n. Etym: [Thermo- + magnetism.]

Defn: Magnetism as affected or caused by the action of heat; the relation of heat to magnetism.

THERMOMETER
Ther*mom"e*ter, n. Etym: [Thermo- + -meter: cf. F. thermomètre. See Thermal.] (Physics)

Defn: An instrument for measuring temperature, founded on the principle that changes of temperature in bodies are accompained by proportional changes in their volumes or dimensions.

Note: The thermometer usually consists of a glass tube of capillary bore, terminating in a bulb, and containing mercury or alcohol, which expanding or contracting according to the temperature to which it is exposed, indicates the degree of heat or cold by the amount of space

occupied, as shown by the position of the top of the liquid column on a graduated scale. See Centigrade, Fahrenheit, and Réaumur. To reduce degrees Fahrenheit to degrees Centigrade, substract 32° and multiply by Air thermometer, Balance thermometer, etc. See under Air, Balance, etc.
-- Metallic thermometer, a form of thermometer indicating changes of temperature by the expansion or contraction of rods or strips of metal.
-- Register thermometer, or Self-registering thermometer, a thermometer that registers the maximum and minimum of temperature occurring in the interval of time between two consecutive settings of the instrument. A common form contains a bit of steel wire to be pushed before the column and left at the point of maximum temperature, or a slide of enamel, which is drawn back by the liquid, and left within it at the point of minimum temperature.

THERMOMETRIC; THERMOMETRICAL
Ther'mo*met"ric, Ther'mo*met"ric*al, a. Etym: [Cf. F. thermométrique.]

1. Of or pertaining to a thermometer; as, the thermometrical scale or tube.

2. Made, or ascertained, by means of a thermometer; as, thermometrical observations.

THERMOMETRICALLY
Ther'mo*met"ric*al*ly, adv.

Defn: In a thermometrical manner; by means of a thermometer.

THERMOMETROGRAPH
Ther'mo*met"ro*graph, n. Etym: [Thermo- + Gr. -graph.] (Physics)

Defn: An instrument for recording graphically the variations of temperature, or the indications of a thermometer.

THERMOMETRY
Ther*mom"e*try, n.

Defn: The estimation of temperature by the use of a thermometric apparatus.

THERMOMOTOR
Ther'mo*mo"tor, n.

Defn: A heat engine; a hot-air engine.

THERMOMULTIPLIER
Ther'mo*mul"ti*pli'er, n. Etym: [Thermo- + multiplier.]

Defn: Same as Thermopile.

THERMONEUROSIS
Ther'mo*neu*ro"sis, n. [NL.] (Med.)
(a) A neurosis caused by exposure to heat.
(b) A neurosis causing rise or fall of a body's temperature.

THERMONEUTRALITY
Ther'mo*neu*tral"i*ty, n. (Chem.)

Defn: Neutrality as regards heat effects.

THERMOPHILIC
Ther'mo*phil"ic, a.  [Thermo-+ Gr.  loving + -ic.]

Defn: Heat-loving; -- applied esp. to certain bacteria.

THERMOPHONE
Ther"mo*phone, n.  [Thermo- + phone.]

1. A portable form of telethermometer, using a telephone in connection with a differential thermometer.

2.  A telephone involving heat effects, as changes in temperature (hence in length) due to pulsations of the line current in a fine wire connected with the receiver diaphragm.

THERMOPHORE
Ther"mo*phore, n.  [Thermo- + Gr.  -bearing, fr.  to bear.]

Defn: An apparatus for conveying heat, as a case containing material which retains its heat for a considerable period.

THERMOPILE
Ther"mo*pile, n. Etym: [Thermo- + pile a heap.] (Physics)

Defn: An instrument of extreme sensibility, used to determine slight differences and degrees of heat. It is composed of alternate bars of antimony and bismuth, or any two metals having different capacities for the conduction of heat, connected with an astatic galvanometer, which is very sensibly affected by the electric current induced in the system of bars when exposed even to the feeblest degrees of heat.

THERMOREGULATOR
Ther'mo*reg"u*la'tor, n. (Physics)

Defn: A device for the automatic regulation of temperature; a thermostat.

THERMOSCOPE
Ther"mo*scope, n. Etym: [Thermo- + -scope.] (Physics)

Defn: An instrument for indicating changes of temperature without indicating the degree of heat by which it is affected; especially, an instrument contrived by Count Rumford which, as modified by Professor Leslie, was afterward called the differential thermometer.

THERMOSCOPIC
Ther'mo*scop"ic, a. (Physics)

Defn: Of or pertaining to the thermoscope; made by means of the thermoscope; as, thermoscopic observations.

THERMOSIPHON
Ther'mo*si"phon, n.

Defn: An arrangement of siphon tubes for assisting circulation in a liquid.

THERMOSTABLE
Ther'mo*sta"ble, a.  [Thermo-+ stable fixed.] (Physiol. Chem.)

Defn: Capable of being heated to or somewhat above 55° C. without loss of special properties; -- said of immune substances, etc.

THERMOSTAT
Ther"mo*stat, n. Etym: [Thermo- + Gr. (Physics)

Defn: A self-acting apparatus for regulating temperature by the unequal expansion of different metals, liquids, or gases by heat, as in opening or closing the damper of a stove, or the like, as the heat becomes greater or less than is desired.

THERMOSTATIC
Ther'mo*stat"ic, a. (Physics)

Defn: Of or pertaining to the thermostat; made or effected by means of the thermostat.

THERMOSYSTALTIC
Ther'mo*sys*tal"tic, a. Etym: [Thermo- + systalic.] (Physiol.)

Defn: Influenced in its contraction by heat or cold; -- said of a muscle.

THERMOTACTIC
Ther'mo*tac"tic, a. (Physiol.)

Defn: Of or retaining to thermotaxis.

THERMOTANK
Ther"mo*tank, n. [Thermo- + ank.]

Defn: A tank containing pipes through which circulates steam, water, air, or the like, for heating or cooling; -- used in some heating and ventilation systems.

THERMOTAXIC
Ther'mo*tax"ic, a. Etym: [Thermo- + Gr. (Physiol.)

Defn: Pertaining to, or connected with, the regulation of temperature in the animal body; as, the thermotaxic nervous system.

THERMOTAXIS
Ther'mo*tax"is, n. [NL.; thermo-+ Gr. an arranging.] (Physiol.)
(a) The property possessed by protoplasm of moving under the influence of heat.
(b) Determination of the direction of locomotion by heat.

THERMOTENSILE
Ther'mo*ten"sile, a.

Defn: Pertaining to the variation of tensile strength with the temperature.

THERMOTENSION
Ther'mo*ten"sion, n. Etym: [Thermo- + tension.]

Defn: A process of increasing the strength of wrought iron by heating it to a determinate temperature, and giving to it, while in that state, a mechanical strain or tension in the direction in which the strength is afterward to be exerted.

THERMOTHERAPY
Ther'mo*ther"a*py, n. [Thermo-+ therapy.] (Med.)

Defn: Treatment of disease by heat, esp. by hot air.

THERMOTIC; THERMOTICAL
Ther*mot"ic, Ther*mot"ic*al, a. Etym: [Gr.

Defn: Of or pertaining to heat; produced by heat; as, thermotical phenomena. Whewell.

THERMOTICS
Ther*mot"ics, n.

1. Time; period; season. [Obsoles.] "This lusty summer's tide." Chaucer.
And rest their weary limbs a tide. Spenser.
Which, at the appointed tide, Each one did make his bride. Spenser.
At the tide of Christ his birth. Fuller.

2. The alternate rising and falling of the waters of the ocean, and of bays, rivers, etc., connected therewith. The tide ebbs and flows twice in each lunar day, or the space of a little more than twenty-four hours. It is occasioned by the attraction of the sun and moon (the influence of the latter being three times that of the former), acting unequally on the waters in different parts of the earth, thus disturbing their equilibrium. A high tide upon one side of the earth is accompanied by a high tide upon the opposite side. Hence, when the sun and moon are in conjunction or opposition, as at new moon and full moon, their action is such as to produce a greater than the usual tide, called the spring tide, as represented in the cut. When the moon is in the first or third quarter, the sun’s attraction in part counteracts the effect of the moon’s attraction, thus producing under the moon a smaller tide than usual, called the neap tide.

Note: The flow or rising of the water is called flood tide, and the reflux, ebb tide.

3. A stream; current; flood; as, a tide of blood. "Let in the tide of knaves once more; my cook and I’ll provide." Shak.

4. Tendency or direction of causes, influences, or events; course; current.

 -- Inferior tide. See under Inferior, a.
 -- To work double tides. See under Work, v. t.
 -- Tide day, the interval between the occurrences of two consecutive maxima of the resultant wave at the same place. Its length varies as the components of sun and moon waves approach to, or recede from, one another. A retardation from this cause is called the lagging of the tide, while the acceleration of the recurrence of high water is termed the priming of the tide. See Lag of the tide, under 2d Lag.
 -- Tide dial, a dial to exhibit the state of the tides at any time.
 -- Tide gate. (a) An opening through which water may flow freely when the tide sets in one direction, but which closes automatically and prevents the water from flowing in the other direction. (b) (Naut.) A place where the tide runs with great velocity, as through a gate.
 -- Tide gauge, a gauge for showing the height of the tide; especially, a contrivance for registering the state of the tide continuously at every instant of time. Brande & C.
 -- Tide lock, a lock situated between an inclosed basin, or a canal, and the tide water of a harbor or river, when they are on different levels, so that craft can pass either way at all times of the tide; -- called also guard lock.
 -- Tide mill. (a) A mill operated by the tidal currents. (b) A mill for clearing lands from tide water.
 -- Tide rip, a body of water made rough by the conflict of opposing tides or currents.
 -- Tide table, a table giving the time of the rise and fall of the tide at any place.
 -- Tide water, water affected by the flow of the tide; hence, broadly, the seaboard.

-- Tide wave, or Tidal wave, the swell of water as the tide moves. That of the ocean is called primitive; that of bays or channels derivative. Whewell.
-- Tide wheel, a water wheel so constructed as to be moved by the ebb or flow of the tide.

Many now work in the salmon industry.

TMESIS
Tme"sis, n. Etym: [L., from Gr. (Gram.)

Defn: The separation of the parts of a compound word by the intervention of one or more words; as, in what place soever, for whatsoever place.

TO-
To- (, see To, prep.) Etym: [AS. to- asunder; akin to G. zer-, and perhaps to L. dis-, or Gr.

Defn: An obsolete intensive prefix used in the formation of compound verbs; as in to-beat, to-break, to-hew, to-rend, to-tear. See these words in the Vocabulary. See the Note on All to, or All-to, under All, adv.

TO
To (emphatic or alone, obscure or unemphatic), prep. Etym: [AS. to; akin to OS. & OFries. to, D. toe, G. zu, OHG. zuo, zua, zo, Russ. do, Ir. & Gael. do, OL. -do, -du, as in endo, indu, in, Gr. Too, Tatoo a beat of drums.]

1. The preposition to primarily indicates approach and arrival, motion made in the direction of a place or thing and attaining it, access; and also, motion or tendency without arrival; movement toward; -- opposed to Ant: from. "To Canterbury they wend." Chaucer.
Stay with us, go not to Wittenberg. Shak.
So to the sylvan lodge They came, that like Pomona’s arbor smiled. Milton.
I’ll to him again, . . . He’ll tell me all his purpose. She stretched her arms to heaven. Dryden.

2. Hence, it indicates motion, course, or tendency toward a time, a state or condition, an aim, or anything capable of being regarded as a limit to a tendency, movement, or action; as, he is going to a trade; he is rising to wealth and honor.

Note: Formerly, by omission of the verb denoting motion, to sometimes followed a form of be, with the sense of at, or in. "When the sun was [gone or declined] to rest." Chaucer.

3. In a very general way, and with innumerable varieties of application, to connects transitive verbs with their remoter or indirect object, and adjectives, nouns, and neuter or passive verbs with a following noun which limits their action. Its sphere verges upon that of for, but it contains less the idea of design or appropriation; as, these remarks were addressed to a large audience; let us keep this seat to ourselves; a substance sweet to the taste; an event painful to the mind; duty to God and to our parents; a dislike to spirituous liquor.
Marks and points out each man of us to slaughter. B. Jonson.
Whilst they, distilled Almost to jelly with the act of fear, Stand dumb and speak not to him. Shak.
Add to your faith virtue; and to virtue knowledge; and to knowledge temperance; and to temperance patience; and to patience godliness; and to godliness brotherly kindness; and to brotherly kindness charity. 2 Pet. i. 5,6,7.
I have a king's oath to the contrary. Shak.
Numbers were crowded to death. Clarendon.
Fate and the dooming gods are deaf to tears. Dryden.
Go, buckle to the law. Dryden.

4. As sign of the infinitive, to had originally the use of last defined, governing the infinitive as a verbal noun, and connecting it as indirect object with a preceding verb or adjective; thus, ready to go, i.e., ready unto going; good to eat, i.e., good for eating; I do my utmost to lead my life pleasantly. But it has come to be the almost constant prefix to the infinitive, even in situations where it has no prepositional meaning, as where the infinitive is direct object or subject; thus, I love to learn, i.e., I love learning; to die for one's country is noble, i.e., the dying for one's country. Where the infinitive denotes the design or purpose, good usage formerly allowed the prefixing of for to the to; as, what went ye out for see (Matt. xi. 8).
Then longen folk to go on pilgrimages, And palmers for to seeken strange stranders. Chaucer.

Note: Such usage is now obsolete or illiterate. In colloquial usage, to often stands for, and supplies, an infinitive already mentioned; thus, he commands me to go with him, but I do not wish to.

5. In many phrases, and in connection with many other words, to has a pregnant meaning, or is used elliptically. Thus, it denotes or implies:
(a) Extent; limit; degree of comprehension; inclusion as far as; as, they met us to the number of three hundred.
We ready are to try our fortunes To the last man. Shak.
Few of the Esquimaux can count to ten. Quant. Rev.

(b) Effect; end; consequence; as, the prince was flattered to his ruin; he engaged in a war to his cost; violent factions exist to the prejudice of the state.
(c) Apposition; connection; antithesis; opposition; as, they engaged hand to hand.
Now we see through a glass, darkly; but then face to face. 1 Cor. xiii. 12.

(d) Accord; adaptation; as, an occupation to his taste; she has a husband to her mind.
He to God's image, she to his was made. Dryden.

(e) Comparison; as, three is to nine as nine is to twenty-seven; it is ten to one that you will offend him.
All that they did was piety to this. B. Jonson.

(f) Addition; union; accumulation.
Wisdom he has, and to his wisdom, courage. Denham.

(g) Accompaniment; as, she sang to his guitar; they danced to the music of a piano.
Anon they move In perfect phalanx to the Dorian mood Of flutes and soft recorders. Milton.

(h) Character; condition of being; purpose subserved or office filled. [In this sense archaic] "I have a king here to my flatterer." Shak.
Made his masters and others . . . to consider him to a little wonder. Walton.

Note: To in to-day, to-night, and to-morrow has the sense or force of for or on; for, or on, (this) day, for, or on, (this) night, for, or on, (the) morrow. To-day, to-night, to-morrow may be considered as compounds, and usually as adverbs; but they are sometimes used as nouns; as, to-day is ours.
To-morrow, and to-morrow, and to-morrow; Creeps in this petty pace from day to day. Shak.
To and again, to and fro. [R.] -- To and fro, forward and back. In this phrase, to is adverbial.
There was great showing both to and fro. Chaucer.
-- To-and-fro, a pacing backward and forward; as, to commence a to-and-fro. Tennyson.
-- To the face, in front of; in behind; hence, in the presence of.
-- To wit, to know; namely. See Wit, v. i.

Note: To, without an object expressed, is used adverbially; as, put to the door, i. e., put the door to its frame, close it; and in the nautical expressions, to heave to, to come to, meaning to a certain position. To, like on, is sometimes used as a command, forward, set to. "To, Achilles! to, Ajax! to!" Shak.

TOAD
Toad, n. Etym: [OE. tode, tade, AS. tadie, tadige; of unknown origin. Cf. Tadpole.] (Zoöl.)

Defn: Any one of numerous species of batrachians belonging to the genus Bufo and allied genera, especially those of the family Bufonidæ. Toads are generally terrestrial in their habits except during the breeding season, when they seek the water. Most of the species burrow beneath the earth in the daytime and come forth to feed on insects at night. Most toads have a rough, warty skin in which are glands that secrete an acrid fluid.

Note: The common toad (Bufo vulgaris) and the natterjack are familiar European species. The common American toad (B. lentiginosus) is similar to the European toad, but is less warty and is more active, moving chiefly by leaping. Obstetrical toad. (Zoöl.) See under Obstetrical.

(c) The peculiar quality of sound in any voice or instrument; as, a rich tone, a reedy tone.
(d) A mode or tune or plain chant; as, the Gregorian tones.

Note: The use of the word tone, both for a sound and for the interval between two sounds or tones, is confusing, but is common -- almost universal.

Note: Nearly every musical sound is composite, consisting of several simultaneous tones having different rates of vibration according to fixed laws, which depend upon the nature of the vibrating body and the mode of excitation. The components (of a composite sound) are called partial tones; that one having the lowest rate of vibration is the fundamental tone, and the other partial tones are called harmonics, or overtones. The vibration ratios of the partial tones composing any sound are expressed by all, or by a part, of the numbers in the series 1, 2, 3, 4, 5, etc.; and the quality of any sound (the tone color) is due in part to the presence or absence of overtones as represented in this series, and in part to the greater or less intensity of those present as compared with the fundamental tone and with one another. Resultant tones, combination tones, summation tones, difference tones, Tartini’s tones (terms only in part synonymous) are produced by the simultaneous sounding of two or more primary (simple or composite) tones.

5. (Med.)

Defn: That state of a body, or of any of its organs or parts, in which the animal functions are healthy and performed with due vigor.

Defn: An annuity, with the benefit of survivorship, or a loan raised on life annuities with the benefit of survivorship. Thus, an annuity is shared among a number, on the principle that the share of each, at his death, is enjoyed by the survivors, until at last the whole goes to the last survivor, or to the last two or three, according to the terms on which the money is advanced. Used also adjectively; as, tontine insurance.
Too many of the financiers by professions are apt to see nothing in revenue but banks, and circulations, and annuities on lives, and tontines, and perpetual rents, and all the small wares of the shop. Burke.

TONTINE INSURANCE
Ton*tine" in*su"rance. (Life Insurance)

Defn: Insurance in which the benefits of the insurance are distributed upon the tontine principle. Under the old, or full tontine, plan, all benefits were forfeited on lapsed policies, on the policies of those who died within the tontine period only the face of the policy was paid without any share of the surplus, and the survivor at the end of the tontine period received the entire surplus. This plan of tontine insurance has been replaced in the United States by the semitontine plan, in which the surplus is divided among the holders of policies in force at the termination of the tontine period, but the reverse for the paid-up value is paid on lapsed policies, and on the policies of those that have died the face is paid. Other modified forms are called free tontine, deferred dividend, etc., according to the nature of the tontine arrangement.

1. (Anat.)

Defn: One of the hard, bony appendages which are borne on the jaws, or on other bones in the walls of the mouth or pharynx of most vertebrates, and which usually aid in the prehension and mastication of food.

Note: The hard parts of teeth are principally made up of dentine, or ivory, and a very hard substance called enamel. These are variously combined in different animals. Each tooth consist of three parts, a crown, or body, projecting above the gum, one or more fangs imbedded in the jaw, and the neck, or intermediate part. In some animals one or more of the teeth are modified into tusks which project from the mouth, as in both sexes of the elephant and of the walrus, and in the male narwhal. In adult man there are thirty-two teeth, composed largely of dentine, but the crowns are covered with enamel, and the fangs with a layer of bone called cementum. Of the eight teeth on

each half of each jaw, the two in front are incisors, then come one canine, cuspid, or dog tooth, two bicuspids, or false molars, and three molars, or grinding teeth. The milk, or temporary, teeth are only twenty in number, there being two incisors, one canine, and two molars on each half of each jaw. The last molars, or wisdom teeth, usually appear long after the others, and occasionally do not appear above the jaw at all.

3. Business of any kind; matter of mutual consideration; affair; dealing. [Obs.]
Have you any further trade with us Shak.

4. Specifically: The act or business of exchanging commodities by barter, or by buying and selling for money; commerce; traffic; barter.

Note: Trade comprehends every species of exchange or dealing, either in the produce of land, in manufactures, in bills, or in money; but it is chiefly used to denote the barter or purchase and sale of goods, wares, and merchandise, either by wholesale or retail. Trade is either foreign or domestic. Foreign trade consists in the exportation and importation of goods, or the exchange of the commodities of different countries. Domestic, or home, trade is the exchange, or buying and selling, of goods within a country. Trade is also by the wholesale, that is, by the package or in large quantities, generally to be sold again, or it is by retail, or in small parcels. The carrying trade is the business of transporting commodities from one country to another, or between places in the same country, by land or water.

5. The business which a person has learned, and which he engages in, for procuring subsistence, or for profit; occupation; especially, mechanical employment as distinguished from the liberal arts, the learned professions, and agriculture; as, we speak of the trade of a smith, of a carpenter, or mason, but not now of the trade of a farmer, or a lawyer, or a physician.

Syn.
 -- Profession; occupation; office; calling; avocation; employment; commerce; dealing; traffic. Board of trade. See under Board.
 -- Trade dollar. See under Dollar.
 -- Trade price, the price at which goods are sold to members of the same trade, or by wholesale dealers to retailers. Trade sale, an auction by and for the trade, especially that of the booksellers.
 -- Trade wind, a wind in the torrid zone, and often a little beyond at, which blows from the same quarter throughout the year, except when affected by local causes; -- so called because of its usefulness to navigators, and hence to trade.

Note: The general direction of the trade winds is from N. E. to S. W.

on the north side of the equator, and from S. E. to N. W. on the south side of the equator. They are produced by the joint effect of the rotation of the earth and the movement of the air from the polar toward the equatorial regions, to supply the vacancy caused by heating, rarefaction, and consequent ascent of the air in the latter regions. The trade winds are principally limited to two belts in the tropical regions, one on each side of the equator, and separated by a belt which is characterized by calms or variable weather.

TRANSCENDENT
Tran*scend"ent, n.

Defn: That which surpasses or is supereminent; that which is very excellent.

TRANSCENDENTAL
Tran‘scen*den"tal, a. Etym: [Cf. F. transcendantal, G. transcendental.]

1. Supereminent; surpassing others; as, transcendental being or qualities.

2. (Philos.)

Defn: In the Kantian system, of or pertaining to that which can be determined a priori in regard to the fundamental principles of all human knowledge. What is transcendental, therefore, transcends empiricism; but is does not transcend all human knowledge, or become transcendent. It simply signifies the a priori or necessary conditions of experience which, though affording the conditions of experience, transcend the sphere of that contingent knowledge which is acquired by experience.

3. Vaguely and ambitiously extravagant in speculation, imagery, or diction.

Note: In mathematics, a quantity is said to be transcendental relative to another quantity when it is expressed as a transcendental function of the latter; thus, ax, 102x, log x, sin x, tan x, etc., are transcendental relative to x. Transcendental curve (Math.), a curve in which one ordinate is a transcendental function of the other.
-- Transcendental equation (Math.), an equation into which a transcendental function of one of the unknown or variable quantities enters.
-- Transcendental function. (Math.) See under Function.

Syn.
-- Transcendental, Empirical. These terms, with the corresponding

nouns, transcendentalism and empiricism, are of comparatively recent origin. Empirical refers to knowledge which is gained by the experience of actual phenomena, without reference to the principles or laws to which they are to be referred, or by which they are to be explained. Transcendental has reference to those beliefs or principles which are not derived from experience, and yet are absolutely necessary to make experience possible or useful. Such, in the better sense of the term, is the transcendental philosophy, or transcendentalism. Each of these words is also used in a bad sense, empiricism applying to that one-sided view of knowledge which neglects or loses sight of the truths or principles referred to above, and trusts to experience alone; transcendentalism, to the opposite extreme, which, in its deprecation of experience, loses sight of the relations which facts and phenomena sustain to principles, and hence to a kind of philosophy, or a use of language, which is vague, obscure, fantastic, or extravagant.

TRANSCENDENTAL
Tran‘scen*den"tal, n.

Defn: A transcendentalist. [Obs.]

TRANSCENDENTALISM
Tran‘scen*den"tal*ism, n. Etym: [Cf. F. transcendantalisme, G. transcendentalismus.]

1. (Kantian Philos.)

Defn: The transcending, or going beyond, empiricism, and ascertaining a priori the fundamental principles of human knowledge.

Note: As Schelling and Hegel claim to have discovered the absolute identity of the objective and subjective in human knowledge, or of things and human conceptions of them, the Kantian distinction between transcendent and transcendental ideas can have no place in their philosophy; and hence, with them, transcendentalism claims to have a true knowledge of all things, material and immaterial, human and divine, so far as the mind is capable of knowing them. And in this sense the word transcendentalism is now most used. It is also sometimes used for that which is vague and illusive in philosophy.

2. Ambitious and imaginative vagueness in thought, imagery, or diction.

Agate, however, is called ruby, in England, where, also, a size intermediate between nonpareil and minion is employed, called emerald. Point system of type bodies (Type Founding), a system adopted by the type founders of the United States by which the various sizes of type have been so modified and changed that each size bears an exact proportional relation to every other size. The system is a modification of a French system, and is based on the pica body. This pica body is divided into twelfths, which are termed "points," and every type body consist of a given number of these points. Many of the type founders indicate the new sizes of type by the number of points, and the old names are gradually being done away with. By the point system type founders cast type of a uniform size and height, whereas formerly fonts of pica or other type made by different founders would often vary slightly so that they could not be used together. There are no type in actual use corresponding to the smaller theoretical sizes of the point system. In some cases, as in that of ruby, the term used designates a different size from that heretofore so called.

Type founder, one who casts or manufacture type.

-- Type foundry, Type foundery, a place for the manufacture of type.

-- Type metal, an alloy used in making type, stereotype plates, etc., and in backing up electrotype plates. It consists essentially

of lead and antimony, often with a little tin, nickel, or copper.
-- Type wheel, a wheel having raised letters or characters on its periphery, and used in typewriters, printing telegraphs, etc.
-- Unity of type (Biol.), that fundamental agreement in structure which is seen in organic beings of the same class, and is quite independent of their habits of life. Darwin.

UN-
Un-. Etym: [OE. un-, on-, the unaccented form of the accented prefix and- (cf. Answer); akin to D. ont-, G. ent-, OHG. int-, Goth. and-. See Anti-.]

Defn: An inseparable verbal prefix or particle. It is prefixed: (a) To verbs to express the contrary, and not the simple negative, of the action of the verb to which it is prefixed; as in uncoil, undo, unfold. (b) To nouns to form verbs expressing privation of the thing, quality, or state expressed by the noun, or separation from it; as in unchild, unsex. Sometimes particles and participial adjectives formed with this prefix coincide in form with compounds of the negative prefix un- (see 2d Un-); as in undone (from undo), meaning unfastened, ruined; and undone (from 2d un- and done) meaning not done, not finished. Un- is sometimes used with an intensive force merely; as in unloose.

Note: Compounds of this prefix are given in full in their proper order in the Vocabulary.

UN-
Un-. Etym: [OE. & AS. un-; akin to OFries. un-, D. on-, OS., OHG., & G. un-, Icel. o-, u-, Sw. o-, Dan. u-, W. an-, L. in-, Gr. an-, a-.

*193. Cf. A- not In- not, No, adv.]

Defn: An inseparable prefix, or particle, signifying not; in-; non-. In- is prefixed mostly to words of Latin origin, or else to words formed by Latin suffixes; un- is of much wider application, and is attached at will to almost any adjective, or participle used adjectively, or adverb, from which it may be desired to form a corresponding negative adjective or adverb, and is also, but less freely, prefixed to nouns. Un- sometimes has merely an intensive force; as in unmerciless, unremorseless. I.

Defn: Un- is prefixed to adjectives, or to words used adjectively. Specifically: --
(a) To adjectives, to denote the absence of the quality designated by the adjective; as, ------ and the like.

(b) To past particles, or to adjectives formed after the analogy of past particles, to indicate the absence of the condition or state expressed by them; as, -Unabolishable Unabsolvable Unabsurd Unabundant Unaccordant Unadoptable Unadventurous Unaffable Unaffectionate Unafraid Unalliable Unallowablew Unalterable Unambiguous Unambitious Unamendable Un-American Unamusive Unangular Unanxious Unapocryphal Unapostolic Unapparent Unappeasable Unapplausive Unappreciable Unapprehensible Unapprehensive Unapproachable Unartificial Unartistic Unassailable Unattainable Unattentive Unauthentic Unavailable Unbailable Unbearable Unbeautiful Unbeliefful Unbelievable Unbeneficial Unbenevolent Unblamable Unblemishable Unblissful Unboastful Unbold Unbookish Unbounteous Unbribable Unbrotherly Unburdensome Unbusinesslike Unbusy Uncandid Uncanonical Uncaptious Uncareful Uncelestial Unceremonious Unchallengeable Unchangeable Unchary Unchastisable Uncheerful

---- and the like.

(c) To present particles which come from intransitive verbs, or are themselves employed as adjectives, to mark the absence of the activity, disposition, or condition implied by the participle; as, ----- and the like.

Note: The above classes of words are unlimited in extent, and such compounds may be formed by any writer or speaker at will from almost all the adjectives or participles in the language, excepting those which have a recognized and usual negative correspondent with the prefix -in. No attempt will be made, therefore, to define them all in this Dictionary; many will be omitted from its Vocabulary which are negations of the simple word, and are readily explained by prefixing a not to the latter. Derivatives of these words in -ly and -ness will also, for the most part, be omitted for the same or similar reasons. There will be inserted as separate articles with definitions, the following: --1. Those which have acquired an opposed or contrary, instead of a merely negative, meaning; as, unfriendly, ungraceful, unpalatable, unquiet, and the like; or else an intensive sense more than a prefixed not would express; as, unending, unparalleled, undisciplined, undoubted, unsafe, and the like. 2. Those which have the value of independent words, inasmuch as the simple words are either not used at all, or are rarely, or at least much less frequently, used; as, unavoidable, unconscionable, undeniable, unspeakable, unprecedented, unruly, and the like; or inasmuch as they are used in a different sense from the usual meaning of the primitive, or especially in one of the significations of the latter; as, unaccountable, unalloyed, unbelieving, unpretending, unreserved, and the like; or inasmuch as they are so frequently and familiarly used that they are hardly felt to be of negative origin; as, uncertain, uneven, and the like. 3. Those which are anomalous, provincial, or, for some other reason, not desirable to be used, and are so indicated; as, unpure for impure, unsatisfaction for dissatisfaction, unexpressible for inexpressible, and the like. II.

Defn: Un- is prefixed to nouns to express the absence of, or the contrary of, that which the noun signifies; as, unbelief, unfaith, unhealth, unrest, untruth, and the like.

Note: Compounds of this last class are given in full in their proper order in the Vocabulary.
